Where you finish is not the whole trip

GUIDED NOTES / use with the projected diagram Name _____

A SAY THE WORD

Displacement / ES: desplazamiento / PT: deslocamento

What changed from start to finish? The sign gives the direction.

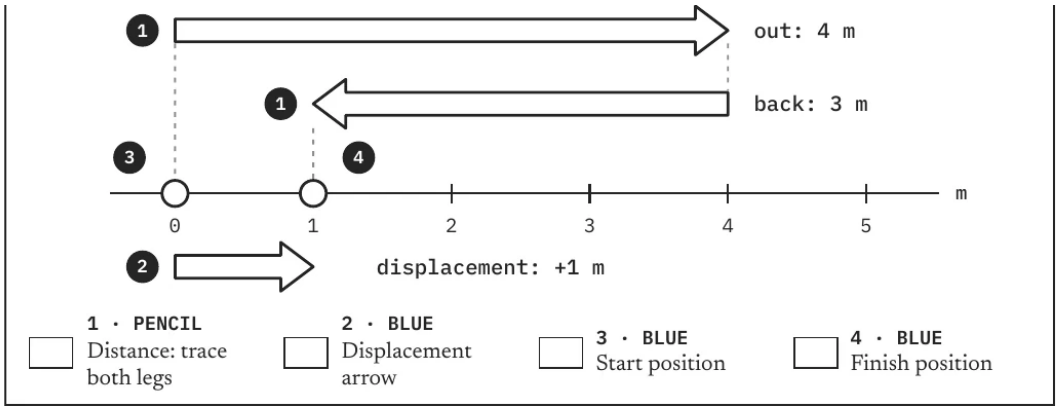

Also on your note page: Position, Distance, Scalar / vector.

B READ THE RELATIONSHIP

Displacement tells how far and which way the finish is from the start.

Displacement = final position − initial position

C TRACE THE ORIGINAL FIGURE

Use the numbered key. Trace one feature. Tell your partner what it means.

D FOLLOW THE WORKED EXAMPLE

A cart goes from 2 m to 6 m, then back to 4 m. Right is positive. Find the distance and the displacement.

Given x i = 2 m turn at 6 m x f = 4 m

Rule distance = leg 1 + leg 2 Δx = x f − x i

Work 4 m + 2 m 4 m − 2 m

Answer distance 6 m displacement +2 m

E SAVE FOR THE FINAL MEETING

Before we can say where XJ is, we need a zero and a + direction. Analysts measure its position from Earth and track its displacement, not the winding path it travels.

Read the physics: Displacement

SUPPORTED READING / read one part, then point to the evidence Name _____

01 PICTURE IT

Draw an origin: this is zero. Choose which way counts as positive. Now a position tells both people the same location.

02 HOW IT WORKS

Trace every part of the trip to find distance. For displacement, go straight from start to finish. Subtract the starting position from the final position. Keep the sign.

03 WHAT TO CHECK

The object can travel a long distance and end close to its start. If it returns to its start, displacement is zero.

04 TRY THE EXAMPLE FROM YOUR NOTES

A cart goes from 2 m to 6 m, then back to 4 m. Right is positive. Find the distance and the displacement. distance 6 m displacement +2 m.

05 CONNECT TO XJ

Before we can say where XJ is, we need a zero and a + direction. Analysts measure its position from Earth and track its displacement, not the winding path it travels.

SAY IT BEFORE YOU WRITE

Which two positions belong in the subtraction? The path is ___. The change from start to finish is ___.

Build the word. Draw the idea.

STUDENT CHOICE / FRONT / OPENING MEETING Name _____

A FRAYER MODEL

Displacement / ES: desplazamiento / PT: deslocamento

Say it in any language. Draw or use a few words. Use the notes to check your idea.

Meaning	How can you tell?
To me, displacement means …	The cart turns around. Which two positions do you need to find its displacement? I compare where it ___ with where it ___.
Example or sketch	**Non-example**
I see it when …	This looks close, but …

B DRAW WITH YOUR TEACHER

Put start, turn, and finish on a number line. Label distance on the path and displacement on the shortcut.

Labels you can use: start · finish · direction.

Choose zero, direction, and scale.

Tell a partner: The path is ___. The change from start to finish is ___.

On assignment: Displacement

SECTION E / BACK / FINAL MEETING ONLY Name _____

A survey rover tracks XJ's model from +2 to +8 to +5 km. Dispatch needs both mileage and final location.

PICK A JOB / DELIVER ONE PRODUCT

☐ **Route engineer**

Draw the two legs for the mileage log and a single arrow for the return crew. Give dispatch the two different numbers.

☐ **Radio dispatcher**

Guide a new driver to the finish. Give the trip length, then its change in position, and tell the driver which number locates the finish from the start.

Word bank: start · finish · direction.

Try: "Our desk recommends ___. This mark shows ___."

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.

"We first said ___. Now we ___ because ___."
