Start with the starting position

GUIDED NOTES / use with the projected diagram Name _____

A SAY THE WORD

Prediction range / ES: intervalo de predicción / PT: intervalo de previsão

A ± bound. “10 ± 2 m” means 8 m to 12 m. More time usually means a wider range.

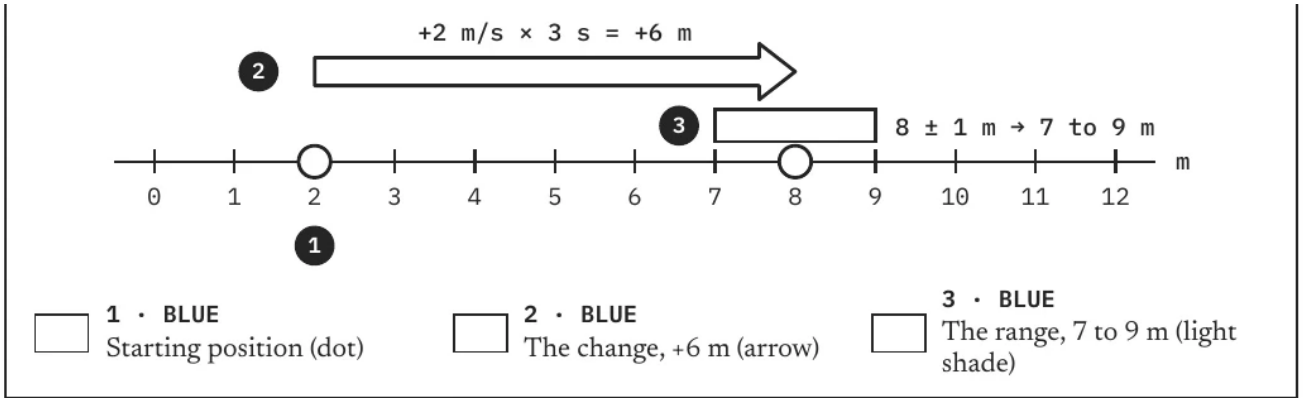

Also on your note page: Starting position, Displacement, Final position.

B READ THE RELATIONSHIP

A forecast gives a position at a future time. A range shows which positions the model allows.

Final position = starting position + velocity × time

C TRACE THE ORIGINAL FIGURE

Use the numbered key. Trace one feature. Tell your partner what it means.

D FOLLOW THE WORKED EXAMPLE

A cart starts at 8 m and moves at –2 m/s for 3 s. Where is it at the end?

Given $x_i = 8$ m $v = -2$ m/s $t = 3$ s

Rule $x_f = x_i + v \times t$

Work change = $(-2)(3) = -6$ m $x_f = 8 - 6$

Answer 2 m moved 6 m left

E SAVE FOR THE FINAL MEETING

With a starting position and a velocity, we can forecast where XJ will be. But every measurement has error, so a responsible forecast is a range, not a single point.

Read the physics: Prediction range

SUPPORTED READING / read one part, then point to the evidence Name _____

01 PICTURE IT

Start from the actual starting position. At steady velocity, multiply velocity by time to get the displacement. Add that signed change to the starting position.

02 HOW IT WORKS

Measurements have limits. Mark the central forecast, then the smallest and largest allowed positions. With exact time, allow for the starting-position error and the velocity error multiplied by time.

03 WHAT TO CHECK

Use compatible units before multiplying. A range gives limits; it does not tell you the chance of landing at one particular point.

04 TRY THE EXAMPLE FROM YOUR NOTES

A cart starts at 8 m and moves at −2 m/s for 3 s. Where is it at the end? 2 m moved 6 m left.

05 CONNECT TO XJ

With a starting position and a velocity, we can forecast where XJ will be. But every measurement has error, so a responsible forecast is a range, not a single point.

SAY IT BEFORE YOU WRITE

What can make the range wider? My center is ___. The allowed positions run from ___ to ___.

Build the word. Draw the idea.

STUDENT CHOICE / FRONT / OPENING MEETING Name _____

A FRAYER MODEL

Prediction range / ES: intervalo de predicción / PT: intervalo de previsão

Say it in any language. Draw or use a few words. Use the notes to check your idea.

Meaning	How can you tell?
To me, prediction range means …	If the forecast is 10 ± 2 km, which positions does it allow? The forecast allows positions from ___ to ___.
Example or sketch	**Non-example**
I see it when …	This looks close, but …

B DRAW WITH YOUR TEACHER

Mark the central forecast and shade its interval. Label one reason the interval could grow.

Labels you can use: center · lower end · upper end.

Choose zero, direction, and scale.

Tell a partner: My center is ___. The allowed positions run from ___ to ___.

On assignment: Prediction range

SECTION E / BACK / FINAL MEETING ONLY Name _____

Two XJ teams predict a center of 20 km. Team A gives ±1 km; team B gives ±4 km. A telescope has one narrow field.

PICK A JOB / DELIVER ONE PRODUCT

☐ **Survey engineer**

Draw both possible bands on one axis. Recommend which report requires a wider search; give both sets of endpoints.

☐ **Weather-desk presenter**

Produce a forecast graphic with two bands. Explain to a viewer which search is wider and what the graphic cannot tell us about impact.

Word bank: center · lower end · upper end.

Try: “Our desk recommends ___. This mark shows ___.”

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.

“We first said ___. Now we ___ because ___.”
