Find the net force before dividing by mass

GUIDED NOTES / use with the projected diagram Name _____

A SAY THE WORD

Net force / ES: fuerza neta / PT: força resultante

Combine opposite forces: subtract and keep the direction of the larger one.

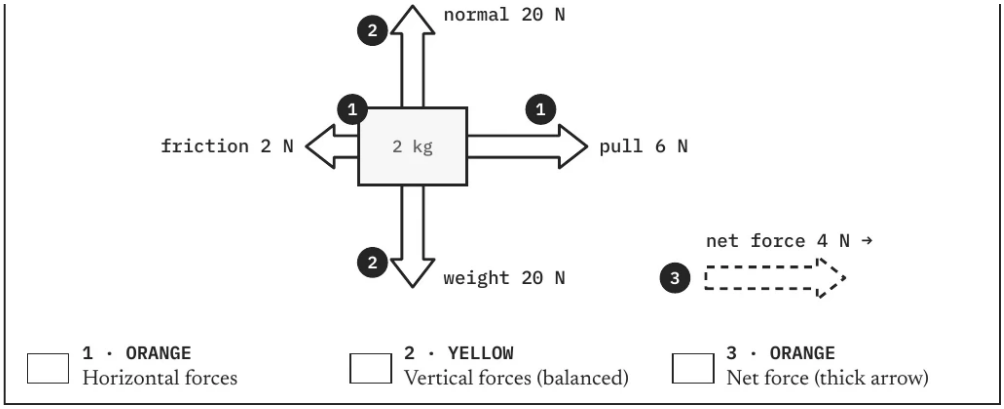

Also on your note page: Newton's second law, Direction, Balanced.

B READ THE RELATIONSHIP

Net force is the sum of all the forces on one object, with directions included.

Add forces first. Then divide by mass.

C TRACE THE ORIGINAL FIGURE

Use the numbered key. Trace one feature. Tell your partner what it means.

D FOLLOW THE WORKED EXAMPLE

A 4 kg cart has 12 N pulling right and 4 N of friction left. Find the acceleration.

Given m = 4 kg 12 N right 4 N left

Rule a = F net ÷ m

Work F net = 12 − 4 = 8 N right a = 8 ÷ 4

Answer 2 m/s² right with the net force

E SAVE FOR THE FINAL MEETING

F = ma links it all: from XJ's mass and the net force on it, we can calculate its acceleration, and from that, how its velocity will change.

Read the physics: Net force

SUPPORTED READING / read one part, then point to the evidence Name _____

01 PICTURE IT

Choose one object and a positive direction. Write forces to the right and left with opposite signs. Add before you divide by mass.

02 HOW IT WORKS

A net-force arrow summarizes the individual forces. Do not add that arrow again. Divide the signed total by mass. Acceleration points in the direction of the net force.

03 WHAT TO CHECK

Velocity can point the other way. A left-moving cart with a rightward acceleration slows at first.

04 TRY THE EXAMPLE FROM YOUR NOTES

A 4 kg cart has 12 N pulling right and 4 N of friction left. Find the acceleration. 2 m/s² right with the net force.

05 CONNECT TO XJ

F = ma links it all: from XJ's mass and the net force on it, we can calculate its acceleration, and from that, how its velocity will change.

SAY IT BEFORE YOU WRITE

Which two steps give acceleration? I added ___ and ___ to get ___. Then I divided by ___.

Build the word. Draw the idea.

STUDENT CHOICE / FRONT / OPENING MEETING Name _____

A FRAYER MODEL

Net force / ES: fuerza neta / PT: força resultante

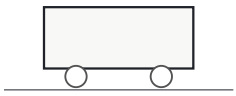

Say it in any language. Draw or use a few words. Use the notes to check your idea.

Meaning	How can you tell?
To me, net force means …	A cart feels 12 N right and 4 N left. Which way is the overall push? How big is it? The two forces together give ___ N to the ___.
Example or sketch	**Non-example**
I see it when …	This looks close, but …

B DRAW WITH YOUR TEACHER

Draw an object with two opposing forces. Write the signed sum under the net arrow.

Labels you can use: force · sum · acceleration.

Tell a partner: I added ___ and ___ to get ___. Then I divided by ___.

On assignment: Net force

SECTION E / BACK / FINAL MEETING ONLY Name _____

A tracking model moves left. Its 4 kg body feels 12 N right and 4 N left. The status display has separate motion and force arrows.

PICK A JOB / DELIVER ONE PRODUCT

☐ **Controls engineer**

Set the net-force and acceleration arrows. Tell the operator what happens to speed at first while velocity points left.

☐ **Replay analyst**

Annotate the slow-motion clip with one arrow for motion and another for acceleration. Explain why they can point opposite ways.

Word bank: force · sum · acceleration.

Try: “Our desk recommends ___. This mark shows ___.”

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.

“We first said ___. Now we ___ because ___.”
