A force pair belongs to two different objects

GUIDED NOTES / use with the projected diagram Name _____

A SAY THE WORD

Interaction pair / ES: par de interacción / PT: par de interação

When A pushes B, B pushes A at the same time.

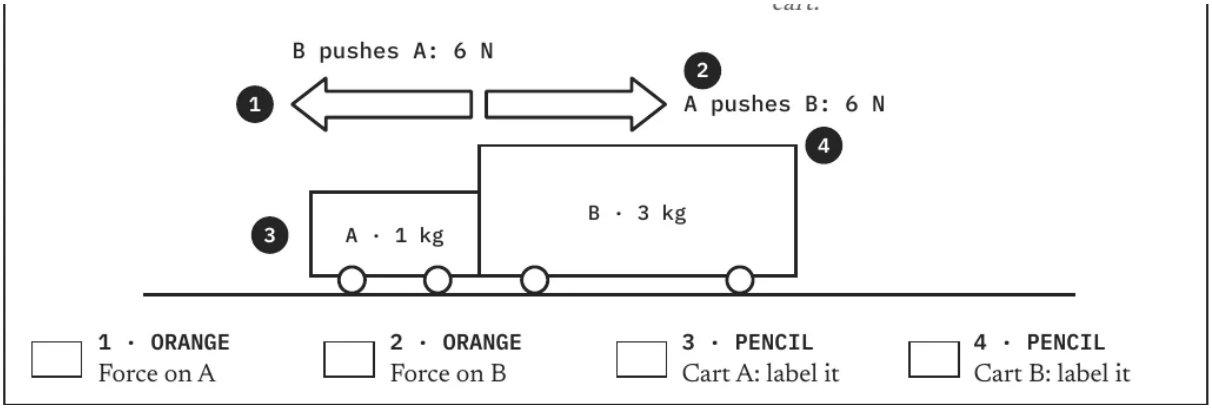

Also on your note page: Equal and opposite, Force receiver, Mass and acceleration.

B READ THE RELATIONSHIP

An interaction pair has two equal and opposite forces on different objects.

Swap the source and receiver to find the partner

C TRACE THE ORIGINAL FIGURE

Use the numbered key. Trace one feature. Tell your partner what it means.

D FOLLOW THE WORKED EXAMPLE

Earth pulls an apple downward. Name the third-law partner force and the object that receives it.

Given Earth → apple gravity, down

Rule swap the object names

Work apple → Earth gravity, up

Answer Apple pulls Earth up Earth receives it

E SAVE FOR THE FINAL MEETING

When Earth pulls on XJ, XJ pulls on Earth just as hard. The forces are equal, but XJ's far smaller mass means its motion is the one that changes noticeably.

Read the physics: Interaction pair

SUPPORTED READING / read one part, then point to the evidence Name _____

01 PICTURE IT

If A pushes B, B pushes A at the same instant. The forces have the same strength. Swap the names to find the other receiver.

02 HOW IT WORKS

Draw one diagram for each receiver. Put only the force on that receiver in its diagram. These two arrows cannot cancel on one object.

03 WHAT TO CHECK

For the same force size, the smaller mass has the larger acceleration. Balanced forces on one object are a different idea.

04 TRY THE EXAMPLE FROM YOUR NOTES

Earth pulls an apple downward. Name the third-law partner force and the object that receives it. Apple pulls Earth up Earth receives it.

05 CONNECT TO XJ

When Earth pulls on XJ, XJ pulls on Earth just as hard. The forces are equal, but XJ's far smaller mass means its motion is the one that changes noticeably.

SAY IT BEFORE YOU WRITE

Do your two arrows end up on the same object? ___ pushes on ___. Its partner is ___ pushing on ___.

Build the word. Draw the idea.

STUDENT CHOICE / FRONT / OPENING MEETING Name _____

A FRAYER MODEL

Interaction pair / ES: par de interacción / PT: par de interação

Say it in any language. Draw or use a few words. Use the notes to check your idea.

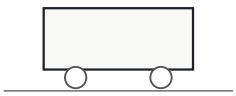

Meaning	How can you tell?
To me, interaction pair means …	Earth pulls on an apple. Who pulls on whom in the other half of the pair? The second force is ___ pulling on ___.
Example or sketch	**Non-example**
I see it when …	This looks close, but …

B DRAW WITH YOUR TEACHER

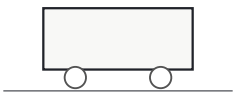

Label both receivers first. Draw equal force arrows on different objects, pointing toward one another for gravity.

Labels you can use: on A · on B · same strength.

Receiver A

Receiver B

Tell a partner: ___ pushes on ___. Its partner is ___ pushing on ___.

On assignment: Interaction pair

SECTION E / BACK / FINAL MEETING ONLY Name _____

Earth pulls on XJ. A public animation shows both gravitational arrows on XJ, with the caption “they cancel.”

PICK A JOB / DELIVER ONE PRODUCT

☐ **Simulation engineer**

Build two object panels. Put each gravitational arrow on its receiver so the animator can render the two motions.

☐ **Science graphics producer**

Prepare a split-screen caption: name who pulls whom and explain why equal force does not mean equal acceleration.

Word bank: on A · on B · same strength.

Try: “Our desk recommends ___. This mark shows ___.”

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.

“We first said ___. Now we ___ because ___.”
