What does the evidence let us say?

GUIDED NOTES / use with the projected diagram Name _____

A SAY THE WORD

Evidence / ES: evidencia / PT: evidência

What was actually stated or measured. “An object is approaching.”

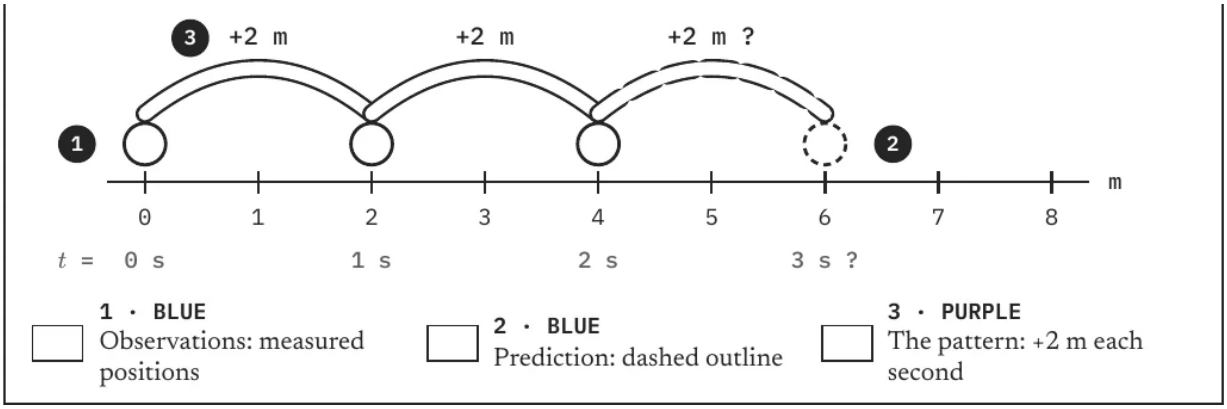

Also on your note page: Inference, Model, Testable question.

B READ THE RELATIONSHIP

New position = starting position + change per second × elapsed time

As you read, find: measured · predicted.

C TRACE THE ORIGINAL FIGURE

Use the numbered key. Trace one feature. Tell your partner what it means.

D FOLLOW THE WORKED EXAMPLE

A cart is at 10 m, 8 m, and 6 m at 0, 1, and 2 s. Predict its position at 4 s, and name an observation that would challenge the model.

Given	x = 10, 8, 6 m t = 0, 1, 2 s
Rule	new x = start + change × time
Work	change = −2 m each second x (4 s) = 6 + (−2)(2)
Answer	2 m limit: a 3 m reading would challenge it

E SAVE FOR THE FINAL MEETING

The desk holds evidence (what was measured) and inference (what it suggests). A forecast for 2026-XJ must rest on the evidence: positions, times, and their uncertainty.

Read the physics: Evidence

SUPPORTED READING / read one part, then point to the evidence Name _____

01 PICTURE IT

A telescope records where an object is at a known time. That is an observation. A future dot is a prediction, even if it follows a clear pattern.

02 HOW IT WORKS

Give each observed dot a time. Compare the gaps between dots. Equal gaps in equal times suggest constant velocity. Draw a dashed dot for the next position. It is still a guess based on a pattern.

03 WHAT TO CHECK

If a new dot misses the predicted position, check the measurement and the motion model.

04 TRY THE EXAMPLE FROM YOUR NOTES

A cart is at 10 m, 8 m, and 6 m at 0, 1, and 2 s. Predict its position at 4 s, and name an observation that would challenge the model. 2 m limit: a 3 m reading would challenge it.

Model check: New position = starting position + change per second × elapsed time.

05 CONNECT TO XJ

The desk holds evidence (what was measured) and inference (what it suggests). A forecast for 2026-XJ must rest on the evidence: positions, times, and their uncertainty.

SAY IT BEFORE YOU WRITE

Which dot did someone measure? The measured dot is ___. The predicted dot is ___.

Build the word. Draw the idea.

STUDENT CHOICE / FRONT / OPENING MEETING Name _____

A FRAYER MODEL

Evidence / ES: evidencia / PT: evidência

Say it in any language. Draw or use a few words. Use the notes to check your idea.

Meaning	How can you tell?
To me, evidence means …	Which measurement backs up your claim? My claim is ___. The measurement that supports it is ___.
Example or sketch	**Non-example**
I see it when …	This looks close, but …

B DRAW WITH YOUR TEACHER

Draw a three-sighting timeline. Label the starting position, change per second, and one future position. Use a dotted mark for the forecast.

Labels you can use: measured · predicted.

Choose zero, direction, and scale.

Tell a partner: The measured dot is ___. The predicted dot is ___.

On assignment: Evidence

SECTION E / BACK / FINAL MEETING ONLY Name _____

Three telescope fixes are at 2, 4 and 6 km at minutes 0, 1 and 2. The night crew has one more exposure.

PICK A JOB / DELIVER ONE PRODUCT

☐ **Telescope scheduler**

Mark where to aim at minute 3. Tell the operator which dots were measured and which dot is your prediction.

☐ **Science broadcaster**

Give a two-sentence update to viewers. Point to a measured dot and say what the camera should see next if the pattern holds.

Word bank: measured · predicted.

Try: “Our desk recommends ___. This mark shows ___.”

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.

“We first said ___. Now we ___ because ___.”

Editor’s check: Name an observation that would make you revise your prediction.
