Average velocity · Frayer & doodle notes

Name _____ Partner _____

SECTION A BUILD THE WORD

Focus word **Average velocity**

From Section A: Average velocity, Average speed, Slope, Instantaneous velocity. For a different word, use the second box to explain how you recognize it.

Meaning in my words Explain it without using the term.	**How can you tell?** Which two changes do you compare to find average velocity?
Example or sketch Draw and label a case that fits.	**Non-example and why** Show a near miss. What rules it out?

SECTION B DOODLE THE IDEA

Sketch a falling position–time line. Label the signed rise, positive run and velocity unit.

My marks mean _____

On assignment: Average velocity

SECTION E / BACK / FINAL MEETING ONLY Name _____

Radar sees XJ at +12 km, then +6 km three seconds later. Positive points away from Earth.

PICK A JOB / DELIVER ONE PRODUCT

☐ **Radar operator**

Send a signed velocity to the tracking console. Mark the two fixes on a sloping line so the next operator can check the sign.

☐ **Traffic broadcaster**

Give viewers a speed and direction. Your producer points at the two readings and asks whether they prove XJ is slowing.

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.

Editor's check: Say what two sightings cannot establish about the velocity between them.
