Average acceleration · Frayer & doodle notes

Name _____ Partner _____

SECTION A BUILD THE WORD

Focus word **Average acceleration**

From Section A: Average acceleration, Speeding up, Slowing down, Reversal. For a different word, use the second box to explain how you recognize it.

Meaning in my words Explain it without using the term.	**How can you tell?** What do you compare at the start and end of the time interval?
Example or sketch Draw and label a case that fits.	**Non-example and why** Show a near miss. What rules it out?

SECTION B DOODLE THE IDEA

Draw before and after velocity arrows. Give the change arrow a sign and the unit m/s².

Before	After

My marks mean _____

On assignment: Average acceleration

SECTION E / BACK / FINAL MEETING ONLY Name _____

Two signed XJ velocities are −2 and −6 km/s, two seconds apart. The control room must choose its speed alert.

PICK A JOB / DELIVER ONE PRODUCT

☐ **Telemetry engineer**

Send the average acceleration with its sign and unit. Sketch before and after velocity arrows so the shift lead can confirm the alert.

☐ **Replay commentator**

Narrate what changed over two seconds. Have your producer show which arrow proves whether XJ sped up or slowed down.

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.

Editor's check: Explain why two readings give an average, not the acceleration at every instant.
