Constant acceleration · Frayer & doodle notes

Name _____ Partner _____

SECTION A BUILD THE WORD

Focus word **Constant acceleration**

From Section A: Constant acceleration, Known quantities, Displacement, Cross-check. For a different word, use the second box to explain how you recognize it.

Meaning in my words Explain it without using the term.	**How can you tell?** The velocities are 0, 2 and 4 m/s, one second apart. What repeats?
Example or sketch Draw and label a case that fits.	**Non-example and why** Show a near miss. What rules it out?

SECTION B DOODLE THE IDEA

Sketch a straight velocity–time line. Label which feature gives acceleration and which gives displacement.

My marks mean _____

On assignment: Constant acceleration

SECTION E / BACK / FINAL MEETING ONLY Name _____

XJ moves from +2 to +6 km/s over 2 s. The rehearsal assumes constant acceleration. Where should the next camera look relative to the start?

PICK A JOB / DELIVER ONE PRODUCT

☐ **Camera engineer**

Draw the velocity–time trace and shade the area. Send the camera its displacement for the end of the shot.

☐ **Replay editor**

Sketch the opening and closing speeds and give a voice-over explaining why using the final speed for the whole clip would miss the shot.

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.

Editor's check: Cross-check with a kinematics equation and name what it assumes.
