Inverse relationship · Frayer & doodle notes

Name _____ Partner _____

SECTION A BUILD THE WORD

Focus word **Inverse relationship**

From Section A: System mass, Control, Inverse relationship, Slope. For a different word, use the second box to explain how you recognize it.

Meaning in my words Explain it without using the term.	**How can you tell?** Keep the net force fixed. If the mass doubles, what happens to acceleration?
Example or sketch Draw and label a case that fits.	**Non-example and why** Show a near miss. What rules it out?

SECTION B DOODLE THE IDEA

Sketch a versus 1/M. Label the axes and units, draw the rising line, and name the quantity represented by its slope.

My marks mean _____

On assignment: Inverse relationship

SECTION E / BACK / FINAL MEETING ONLY Name _____

Two asteroid models get the same net force for the same time. Model H has twice the mass of L.

PICK A JOB / DELIVER ONE PRODUCT

☐ **Test engineer**

Build a two-row test card. Pick the model with the larger velocity change and show the mass comparison for the test crew.

☐ **Lab correspondent**

Explain to viewers why two equal pushes can look different. Your producer must check what stayed the same in both trials.

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.

Editor's check: Use mass × acceleration as an independent check.
