What changes an asteroid’s path?

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Explain how gravity can change velocity without contact.

SUCCESS CRITERIA - I can...

1. Draw velocity tangent to a path and force toward the attracting body.
2. Distinguish motion from a change in motion.
3. State what a prediction of straight-line motion leaves out.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

A **3 kg** cart starts from rest under **15 N** net force right for **2 s**.
1. **Find acceleration** and final velocity.
2. **State one thing you** are treating as true.

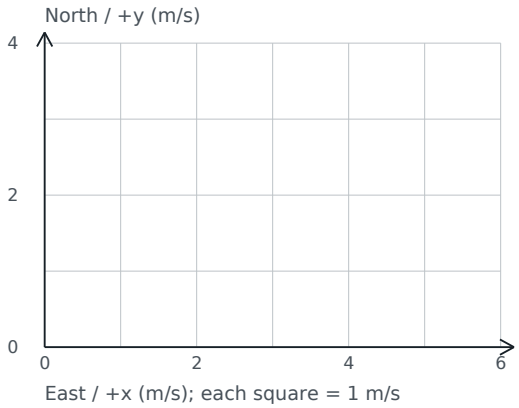

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: $a = F_{net}/m$.
Gravity attracts masses and can change speed, direction or both. Our asteroid scenario is fictional.

Worked reasoning: A fictional asteroid has a velocity arrow pointing right. A brief upward force gives it an upward change in velocity. The new velocity combines the original rightward motion with this change.

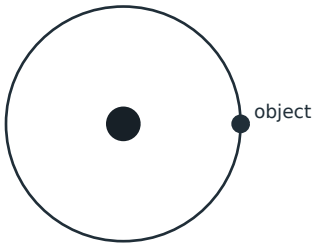

Your turn: A spacecraft is initially moving right. A short thruster burn adds an upward change in velocity.
1. **Draw the original velocity** and the change head-to-tail.
2. **Draw the final velocity** from the starting tail to the ending tip.

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

1. **Sketch the velocity** and gravitational-force arrows at the marked point on the orbit.
2. Why do they point in different directions?

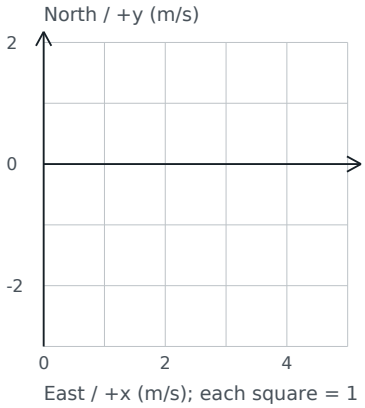

The center is the attracting body; the small dot on the circle is the orbiting object.

Marzano check - circle: ① ② ③

04 Apply the physics

In a flight simulator, a probe moves right at **4 m/s**. After a **1 s** thruster burn, it also moves down at **1 m/s**.
1. **Add the components** and final velocity to the grid.
2. **Explain why the probe still** moves right.

Marzano check - circle: ① ② ③

What changes an asteroid’s path?

antocciphysics

05 Explain your reasoning

A student says space has no gravity because astronauts float. **Explain how orbiting astronauts can** be falling.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

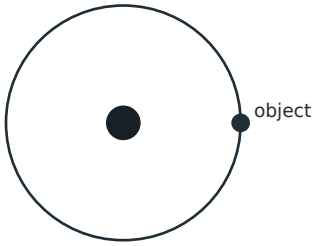

With a fixed net force, a **5 kg** system accelerates at **14 m/s²**. **Predict acceleration** for a **10 kg** system. **State a control needed** for this comparison.
Use the table to keep the controlled and changed quantities distinct.

Trial	Mass	Net force	Acceleration
A	____	____	____
B	____	____	____

Marzano check - circle: 1 2 3

07 Exit check

Name one observation that shows velocity is changing even if speed stays the same.

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

A probe repeats the same thruster test, first with a short burn and then with a longer burn. Mass and thrust stay fixed.
1. **Sketch a velocity-change arrow** for each trial.
2. Which burn causes a larger change, and why?

Compare the two burns

Right is positive.

Velocity:

Acceleration / force:
