Stopping time and force

antocciphysics

UNIT 3 / DAY 4 / HONORS

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Explain how a longer stop can reduce average force.

SUCCESS CRITERIA - I can...

1. Keep momentum change fixed in a fair comparison.
2. Compare force using impulse divided by time.
3. State why cushioning does not remove momentum change.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

A **3 kg** cart moving right at **5 m/s** stops in **2 s**. Take right as positive. **Find signed impulse** and average force.

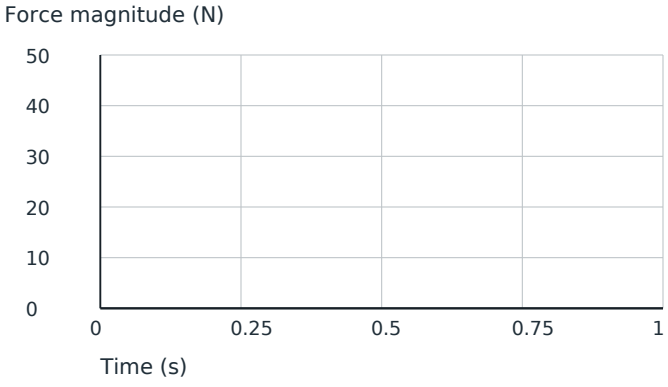

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: $|F_{avg}| = |\Delta p|/\Delta t$.
For the same momentum change, more stopping time lowers average force magnitude. Bars mean magnitude.

Worked reasoning: A stopping impulse has magnitude **8 N·s**. Over **0.2 s**, average force is **40 N**; over **0.8 s**, it is **10 N**. Longer stopping time lowers the average force for the same momentum change.

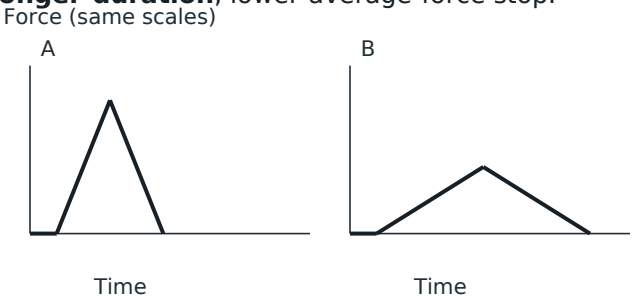

Your turn: Draw both force-time rectangles with equal areas.

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

The two ideal force pulses have equal area. **Name the longer-duration**, lower-average-force stop.

Marzano check - circle: ① ② ③

04 Apply the physics

A **0.060 kg** ball traveling at **20 m/s** comes to rest.
1. **Compare two catches**: **0.010 s** and **0.050 s**.
2. **Find the impulse** and average stopping-force magnitude for each.
3. **Use the table** to **show what changes** and what stays the same.

Stop	Time (s)	Impulse (N·s)	Average force (N)
A	____	____	____
B	____	____	____

Marzano check - circle: ① ② ③

Stopping time and force

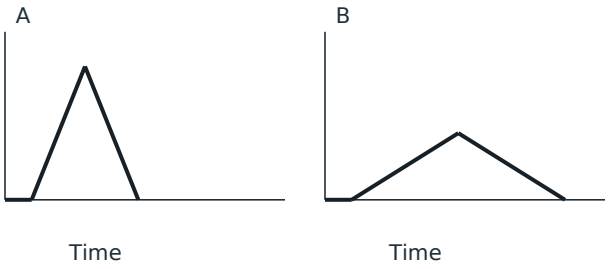

antocciphysics

Continue down each column.

05 Explain your reasoning

A student says a cushion makes momentum disappear. **Explain where the momentum change** comes from and what cushioning changes.

Force (same scales)

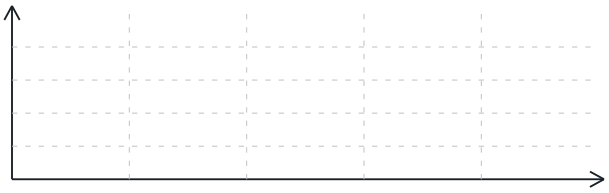

Same scales: compare impulse and peak force.

Marzano check - circle: ① ② ③

06 Review: connect an earlier idea

A downward-velocity fit goes from **0.4 m/s** at **0.02 s** to **3.34 m/s** at **0.32 s**. **Find g** and **explain why fitting an interval** can be better than one noisy point.
Sketch the motion and **label a positive direction**.

Velocity (m/s)

Marzano check - circle: ① ② ③

07 Exit check

A **2 kg** object slows from **6** to **2 m/s** in **0.50 s**. **Find impulse** and average net force. If time becomes **1.0 s** for the same velocity change, find the new average force.

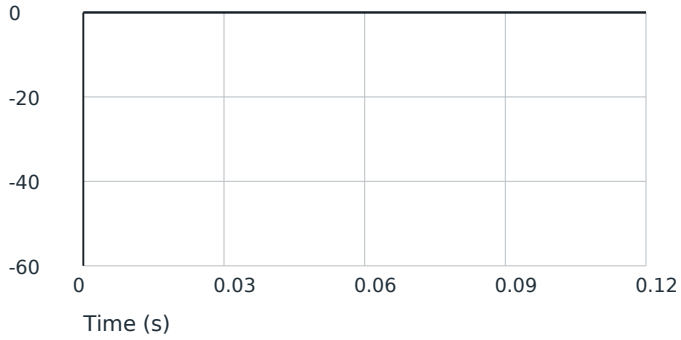

Trial	Duration	Average force
Original	Δt	F
New	____	____

Marzano check - circle: ① ② ③

08 STRETCH: test the prediction

A **0.2 kg** ball at **15 m/s** stops in **0.03 s** on one surface and **0.12 s** on another. **Find average forces** and design a triangular force–time graph for the longer stop.

Stopping force (N)

Marzano check - circle: ① ② ③
