Angled and negative work

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use force direction to determine work's sign and size.

SUCCESS CRITERIA - I can...

1. Compare force direction with displacement.
2. Use the parallel force component.
3. Explain positive, negative and zero work.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use "work" and "component" to explain your answer. Sentence starters are optional.

work: energy transferred by a force along a displacement

component: the part of a vector along one chosen axis

perpendicular: at a right angle, 90°, to a line or surface

01 Warm-up: bring back an earlier idea

A fixed impulse changes a target's sideways velocity by **0.03 m/s**. **Find the predicted shift after 500 s** and **state a limitation**.

Word help: impulse = net force acting over time; change in momentum

Sentence starter: I think ... . I can point to ..., which shows ..., so ... .

Marzano check - circle: ① ② ③

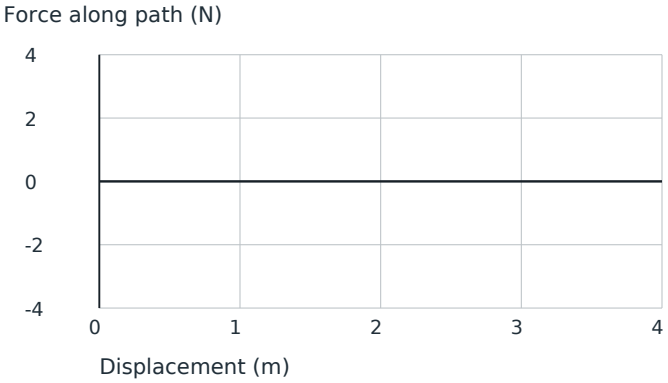

02 Worked example: explain the prediction

Reference: $W = Fd\cos\theta = F_{parallel}\, d$.
θ is between force and displacement. CPA uses the supplied parallel component. Opposite force gives negative work.

Worked reasoning: A box moves **4 m** right while friction acts **3 N** left. Friction's work is **-3×4=-12 J** because force opposes displacement.

Your turn: 1. **Draw force** and displacement arrows.
2. **Add a perpendicular upward force** and **state its work** for this horizontal motion.

Sentence starter: In my work, I used ... to show ... . I labeled it ... .

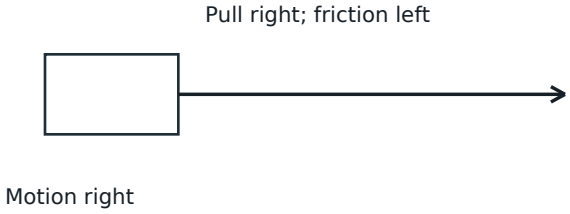

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

The box moves right. Classify work by a rightward pull, leftward friction and upward normal force.

Sentence starter: I notice ... . This supports ... because ... .

The rectangle is the box. Add the requested force and displacement labels.

Marzano check - circle: ① ② ③

04 Apply the physics

A rope pulls a crate **3 m** right. Its forward force component is **8 N**; friction is **2 N** left.
1. **Draw the force components** and displacement.
2. **Calculate rope work**, friction work and net work.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: ① ② ③

Angled and negative work

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Explain your reasoning

A force perpendicular to velocity can bend a path without changing speed. Explain using work.

Sentence starter: I think … . I can point to …, which shows …, so … .

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

Two carts separate from rest with no external horizontal impulse. One has momentum **24 kg·m/s** left. **Find the other's momentum**.
Use before and after snapshots to organize the momentum account.

Word help: external = acting from outside the chosen system

Sentence starter: I found … [unit]. This value means … in this situation.

Before	**After**

Label mass, velocity and momentum.

Marzano check - circle: 1 2 3

07 Exit check

A **5 N** friction force acts opposite a **4 m** displacement. **State work** with sign and units.

Sentence starter: I notice … . This supports … because … .

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

A pull does **+20 J** and friction does **-8 J**.
1. **Draw work-transfer arrows** and **find net work**.
2. **What changes** if friction is twice as large over the same path?

Sentence starter: I found … [unit]. This value means … in this situation.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3
