The energy that becomes thermal

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Account for mechanical energy changes through heating and deformation.

SUCCESS CRITERIA - I can...

1. Track system boundaries in an energy balance.
2. Distinguish thermal energy from temperature.
3. Use energy differences to quantify a transfer.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “thermal energy” and “system” to explain your answer. Sentence starters are optional.

thermal energy: internal energy associated with microscopic motion/interactions

system: the object or objects chosen for analysis

conserved: unchanged in total under the stated conditions

01 Warm-up: bring back an earlier idea

A spring has k=**300 N/m** and stores **0.375 J**. **Find displacement magnitude** and force magnitude.

Word help: magnitude = size of a quantity without its direction

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: $E_{mechanical,\ i} = E_{mechanical,\ f} + \Delta E_{thermal}$.
No other transfers in this calculation; include contacting materials in the system. Friction transfers mechanical energy to internal energy.

Worked reasoning: A **2 N** friction force opposes a sliding box over **5 m**. It does **-10 J** of work; in a suitable box-floor system this appears as a **10 J** thermal-energy increase.

Your turn: 1. **Draw the force**, displacement and energy transfer.
2. **Name the system** for your energy account.

Sentence starter: In my work, I used ... to show ... . I labeled it ... .

Initial **Transfers** **Final**

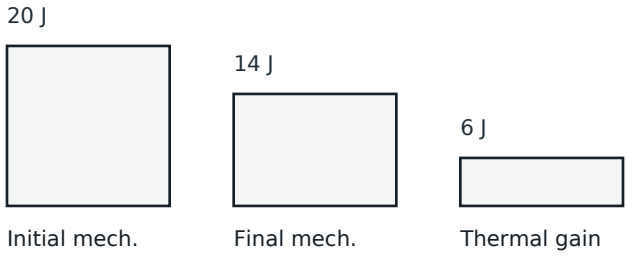

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

A cart begins with **20 J** mechanical energy and ends with **14 J**. The closed accounting includes **6 J** thermal increase. Does it balance?

Sentence starter: I notice ... . This supports ... because ... .

Bar height represents energy. Read the value and unit above each bar.

Marzano check - circle: ① ② ③

The energy that becomes thermal

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

04 Apply the physics

A **2 kg** object slows from **5** to **2 m/s** on a horizontal surface. **Find mechanical energy loss**. If all becomes internal energy of object+surface, find that increase. **Use the energy** diagram to **show the quantities you compare**; **label units** and any unknowns.

Sentence starter: Both ... . They differ in ... because ... .

Initial **Transfers** **Final**

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: 1 2 3

05 Explain your reasoning

Does the same energy input always produce the same temperature rise in two different objects? **Name quantities you would need**.

Sentence starter: Both ... . They differ in ... because ... .

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

Net force rises linearly from zero to **12 N** over **0.4 m**. **Find work** and final speed for a **0.4 kg** cart starting at rest.
Use the signed area to connect force and work.

Word help: work = energy transferred by a force along a displacement

Sentence starter: I found ... [unit]. This value means ... in this situation.

Force (N)

Position (m)

Marzano check - circle: 1 2 3

07 Exit check

A **0.50 kg** object at **6 m/s** stops through friction. **Find energy transformed**. If stopping distance is **1.5 m**, find average opposing force. **Use the energy** diagram to **show the quantities you compare**; **label units** and any unknowns.

Sentence starter: Both ... . They differ in ... because ... .

Initial **Transfers** **Final**

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

A **3 kg** box slides down a **4 m** ramp inclined **30°** with friction magnitude **5 N**. Starting at rest and using g=**10**, find final speed. **Use the energy** diagram to **show the quantities you compare**; **label units** and any unknowns.

Word help: at rest = not moving in the chosen reference frame

Sentence starter: Both ... . They differ in ... because ... .

Initial **Transfers** **Final**

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: 1 2 3
