Gravitational potential energy

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Relate height change to near-surface gravitational energy.

SUCCESS CRITERIA - I can...

1. Choose a height reference.
2. Use ΔU=mgΔh with the stated g.
3. Distinguish potential energy from force.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

A **3 kg** object slows from **7** to **5 m/s**. **Find net work** and **check its sign**.

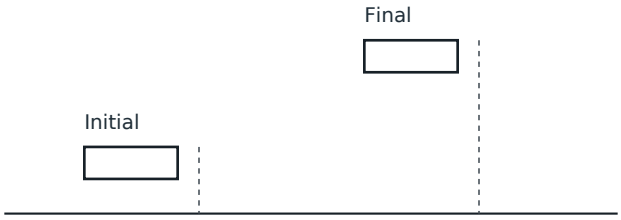

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: $\Delta U = mg\,\Delta h = mg(h_f - h_i)$.
Approximately constant g = **10 N/kg**. **Choose a zero height**; the energy change does not depend on that choice.

Worked reasoning: Raising a **2 kg** object by **3 m** with g=**10 N/kg** increases gravitational potential energy by mgh=**60 J**. The chosen zero does not affect this change.

Your turn: Draw initial and final height levels and **label the 3 m** difference.

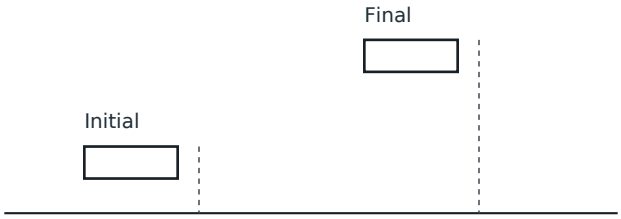

Choose and label a zero-height level.

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

Two identical books sit at heights **1** and **3 m** above the floor. Which has more gravitational potential energy relative to the floor?

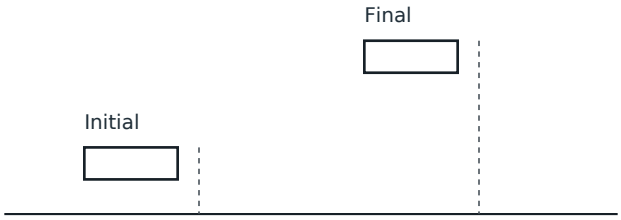

Choose and label a zero-height level.

Marzano check - circle: ① ② ③

04 Apply the physics

A **5 kg** load rises from **4 m** to **7 m** above the floor.
1. Use g = **10 N/kg**.
2. **Find its change** in gravitational potential energy.
3. Repeat with U = **0** at a level **2 m** above the floor.
4. **Label both height references** and **explain what stays unchanged**.

Choose and label a zero-height level.

Marzano check - circle: ① ② ③

Gravitational potential energy

antocciphysics

Continue down each column.

05 Explain your reasoning

Does a negative value of U relative to a chosen zero imply a negative mass or impossible height?

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

Two **4 kg** carts at **+6** and **-4 m/s** stick. **Find final velocity** and use kinetic energy to **explain why this** is not elastic.
Use before and after snapshots to organize the momentum account.

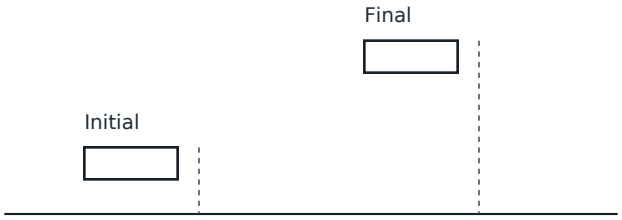

Before	**After**

Label mass, velocity and momentum.

Marzano check - circle: 1 2 3

07 Exit check

A **2 kg** object descends **4 m**.
1. Find ΔU and work by gravity.
2. **Label the relevant heights or** distances on the diagram.
3. Use g = **10 N/kg** when needed.

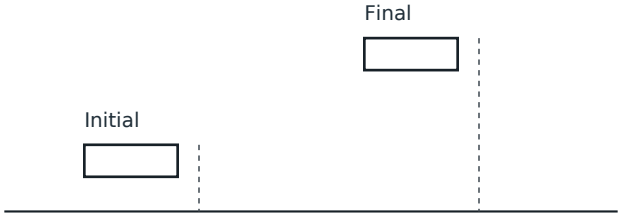

Choose and label a zero-height level.

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

A **3 kg** object moves from **2 m** below a chosen zero to **5 m** above it.
1. Use g=**10**.
2. **Find initial U**, final U and work by gravity.
3. **Label the relevant heights or** distances on the diagram.

Choose and label a zero-height level.

Marzano check - circle: 1 2 3
