Transfer: energy and work

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Choose and justify energy methods in new physical situations.

SUCCESS CRITERIA - I can...

1. Choose the correct energy terms and units.
2. Show a consistent numerical balance.
3. Explain what your calculation treats as true and when it stops working.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

At fixed speed, mass becomes **3** times as large while energy-coupling fraction becomes **1/5** as large. **Compare coupled energy**.

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: $W_{net} = \Delta K$; $K = \frac{1}{2}mv^2$; $U_g = mgh$; $U_s = \frac{1}{2}kx^2$
$P = W/\Delta t$.
g = **10 N/kg** where needed. Select relationships for the system and facts stated here.

Worked reasoning: A **2 kg** cart drops **2 m** with g =**10**, then loses **10 J** to friction. From rest, its final kinetic energy is **40**-**10**=**30 J**, so speed √**30**≈**5.48 m/s**.

Your turn: Draw a complete energy account and a sketch identifying where friction acts.

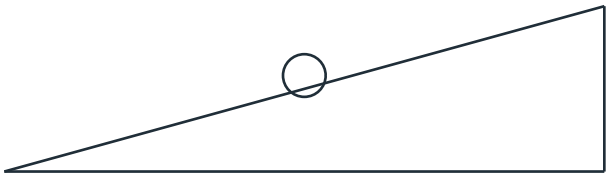

Initial	Transfers	Final

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

A cart coasts down a frictionless ramp from rest. **Explain which energy decreases** and which increases. **Mark the vertical height** in the sketch.

The marker represents the object on the sloping surface.

Marzano check - circle: ① ② ③

04 Apply the physics

A **2 kg** cart starts from rest **3 m** above the bottom of a ramp. It reaches the bottom at **4 m/s**, then compresses a **200 N/m** spring on a frictionless level section. Use g = **10 N/kg**. **Complete the energy account** to **find the ramp's energy loss** and maximum spring compression.

Initial	Transfers	Final

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: ① ② ③

Transfer: energy and work

antocciphysics

Continue down each column.

05 Explain your reasoning

A motor supplies **100 J** while the load gains **70 J** mechanical energy. **Explain where the other 30 J** might go and whether energy was destroyed.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

A ball is thrown vertically upward at **20 m/s** from h=**0**. Use g=**10** and neglect drag. **Find maximum height** by energy.
Show the energy changes and transfers; **label units**.

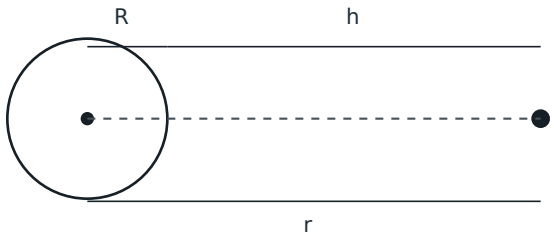

Initial **Transfers** **Final**

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: 1 2 3

07 Exit check

A simulated source has GM=**200 m³/s²**. At r=**4 m**, find escape speed and **name two things your calculation** treats as true. **Use the energy** diagram to **show the quantities you compare**; **label units** and any unknowns.

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

A **3 kg** cart starts at **2 m/s**, drops **1 m**, then compresses a spring k=**200 N/m**. Friction removes **11 J** before maximum compression; g=**10**.
1. **Find compression** and **check the final energy account**.
2. **Use the energy** diagram to **show the quantities you compare**; **label units** and any unknowns.

Initial **Transfers** **Final**

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: 1 2 3
