Atmospheric entry

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use energy and geometry to discuss entry heating without claiming a guaranteed outcome.

SUCCESS CRITERIA - I can...

1. Compare kinetic energy with a stated heating requirement.
2. Explain the role of surface area relative to mass.
3. Name missing factors in a survival prediction.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “ablation” and “thermal energy” to explain your answer. Sentence starters are optional.

ablation: loss of surface material during heating or erosion

thermal energy: internal energy associated with microscopic motion/interactions

impact: a collision or strike between objects

01 Warm-up: bring back an earlier idea

A system receives **50 J** heat and does **30 J** work on its surroundings. Find ΔU with $\Delta U = Q - W_{by}$.

Word help: surroundings = everything outside the chosen system

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: $K = \frac{1}{2}mv^2$

$Q_{absorbed}$ = fraction absorbed × energy available.

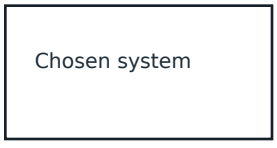

Entry also involves ablation and fragmentation. An energy comparison alone cannot predict survival.

Worked reasoning: A fictional entering object loses **1000 J** of mechanical energy; a supplied calculation assigns **700 J** to heated air and **300 J** to the object. Those shares are values you are told to use, not universal atmospheric-entry fractions.

Your turn: Draw the energy budget and **name one measurement needed** to **test the shares**.

Sentence starter: In my work, I used ... to show ... . I labeled it ... .

Draw and label all energy transfers across the boundary.

Stored energy change: _____ J

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

1. **Compare a small** and a large sphere of the same material.
2. Which has more surface area per unit mass?
3. What does that suggest about surface interactions per kilogram?

Sentence starter: Both ... . They differ in ... because ... .

A B

Marzano check - circle: ① ② ③

Atmospheric entry

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

04 Apply the physics

An atmospheric-entry simulation assigns an object in the simulation **100 J** of kinetic energy. A specified heating change requires **20 J**.
1. **Find the ratio**, then **draw two possible energy partitions**.
2. Does enough total energy prove that all of it heats the object?
3. Explain.

Sentence starter: I think … . I can point to …, which shows …, so … .

Draw and label all energy transfers across the boundary.

Chosen system

Stored energy change: _____ J

Marzano check - circle: 1 2 3

05 Explain your reasoning

Name at least three additional quantities needed before claiming a particular rock completely ablates or reaches the ground.

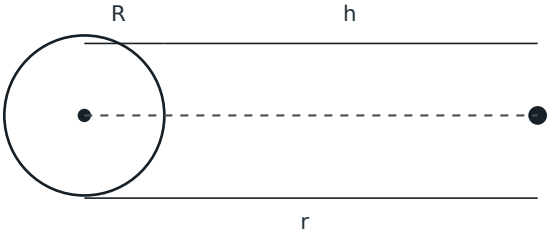

Sentence starter: I notice … . This supports … because … .

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

A simplified calculation requires **24 J** for escape. An object has only **20 J** and receives no energy later. Does the calculation predict escape? Explain. **Label the distances or energy** levels used in your reasoning.

Sentence starter: I predict … . I used … to make this prediction because … .

Marzano check - circle: 1 2 3

07 Exit check

Two equal-density spheres have radii r and **2** r. Supplied fact: area grows **4** times and mass **8** times.
1. **Compare area per mass**.
2. **Label energy entering**, leaving or stored on the diagram of the objects you are studying.

Sentence starter: Both … . They differ in … because … .

Radius r Radius 2r

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

1. **Compare two objects** with the same **1000 J** energy loss but different assumed fractions heating the object: **20%** and **60%**.
2. **Find both heating amounts** and **explain why survival** is still uncertain **0**.
3. **Label energy entering**, leaving or stored on the diagram of the objects you are studying.

Sentence starter: Both … . They differ in … because … .

Draw and label all energy transfers across the boundary.

Chosen system

Stored energy change: _____ J

Marzano check - circle: 1 2 3
