The electromagnetic spectrum

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Relate electromagnetic wavelength, frequency and propagation.

SUCCESS CRITERIA - I can...

1. Use c=fλ in vacuum.
2. Order spectral regions by wavelength.
3. Distinguish electromagnetic from mechanical waves.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “electromagnetic” and “spectrum” to explain your answer. Sentence starters are optional.

electromagnetic: involving coupled electric and magnetic fields

spectrum: a range arranged by frequency or wavelength

vacuum: space with negligible matter

01 Warm-up: bring back an earlier idea

A closed-open pipe has length **0.3 m**.
1. Use λ=**4 L** for the fundamental and v=**340 m/s**.
2. **Find its fundamental frequency**.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: c = f λ; c = **3.0×10⁸ m/s**.
Electromagnetic waves in vacuum. Frequency identifies spectral region; mechanical sound needs a medium.

Worked reasoning: In vacuum, all electromagnetic waves travel at c=**3×10⁸ m/s**. A frequency of **10⁸ Hz** gives wavelength **3 m**. Higher frequency means shorter wavelength at the same speed.

Your turn: Draw two waves with a common speed but different wavelengths; **label which has higher frequency**.

Sentence starter: Both ... . They differ in ... because ... .

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

Order radio, visible and X-rays from longest to shortest wavelength **0**. Which has greatest frequency in vacuum?

Sentence starter: I notice ... . This supports ... because ... .

Radio	IR	Visible	UV	X-ray

Label increasing frequency and wavelength.

Marzano check - circle: ① ② ③

04 Apply the physics

Compare two signals in vacuum: light of wavelength **600 nm** and radio of frequency **100 MHz**. Use c = **3 × 10⁸ m/s**, **1 nm = 10⁻⁹ m** and **1 MHz = 10⁶ Hz**. **Find the light’s frequency** and radio wavelength. **Complete the table**.

Sentence starter: Both ... . They differ in ... because ... .

Signal	Frequency (Hz)	Wavelength (m)
Light	____	600×10^{-9}
Radio	100×10^{6}	____

Marzano check - circle: ① ② ③

The electromagnetic spectrum

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Explain your reasoning

Why can sunlight cross space but ordinary sound from a speaker cannot cross a vacuum?

Sentence starter: For this answer, I treated … as true. I found … . This supports … because … .

Marzano check - circle: ① ② ③

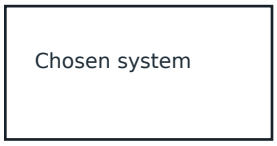

06 Review: connect an earlier idea

A heat engine operates between **600 K** and **400 K** and absorbs **800 J**. **Find maximum ideal work** and **explain why actual work** is usually lower.
Label energy entering, leaving and stored.

Word help: ideal = using stated simplifying conditions

Sentence starter: For this answer, I treated … as true. I found … . This supports … because … .

Draw and label all energy transfers across the boundary.

Stored energy change: _____ J

Marzano check - circle: ① ② ③

07 Exit check

A wave has f=**2.4×10^{9} Hz** in vacuum.
1. Find λ.
2. **Name the spectral region**.

Sentence starter: I found … [unit]. This value means … in this situation.

Radio	IR	Visible	UV	X-ray

Label increasing frequency and wavelength.

Marzano check - circle: ① ② ③

08 STRETCH: test the prediction

Visible light has wavelength **600 nm**.
1. **Find frequency** using **1 nm=10^{-9} m**.
2. Compare with light of wavelength **300 nm**.

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: ① ② ③
