Plane mirrors

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use the reflection law and locate a virtual image.

SUCCESS CRITERIA - I can...

1. Measure angles from the normal.
2. Use equal incidence and reflection angles.
3. Place the image the same perpendicular distance behind the mirror.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

Sensors **1.02 m** apart record delay **0.003 s**. **Find wave speed**. If **0.0005 s** is added to the delay, find the incorrect speed and **describe the bias**.

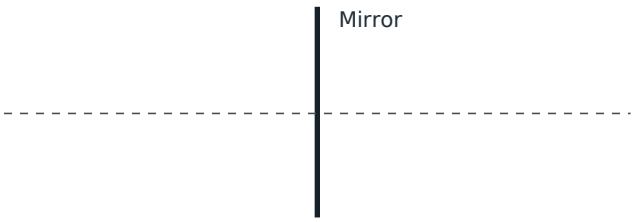

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: $\theta_{incident} = \theta_{reflected}$
image distance behind = object distance in front.
Plane mirror; **measure angles** from the normal. The image is virtual.

Worked reasoning: An object **2 m** in front of an ideal plane mirror has a virtual image **2 m** behind it. The object-image separation is **4 m**; reflected rays appear to come from the image.

Your turn: Draw the mirror, object, image and backward extensions of two reflected rays.

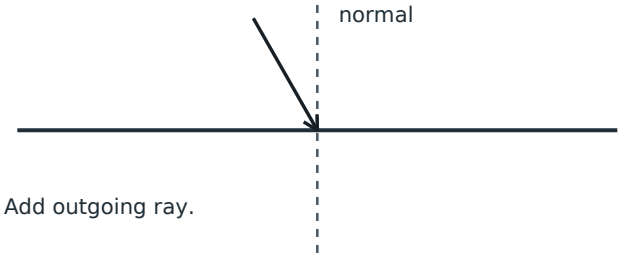

Add object / image or incident / reflected rays.

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

Draw the normal at the mirror. **Complete a reflected ray** for an incident ray **30°** from normal.

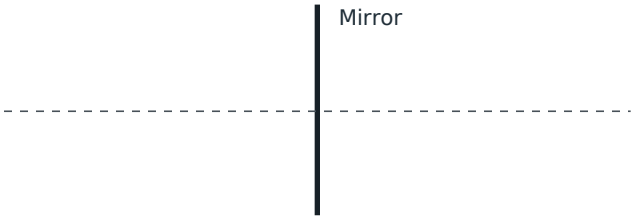

Add outgoing ray.

Marzano check - circle: ① ② ③

04 Apply the physics

A laser ray makes a **20°** angle with a plane mirror's surface.
1. **Draw the normal** and both rays.
2. **Find incidence angle measured** from the normal, then **the angle** between the incident and reflected ray segments drawn away from the contact point.

Add object / image or incident / reflected rays.

Marzano check - circle: ① ② ③

Plane mirrors

antocciphysics

Continue down each column.

05 Explain your reasoning

Why is the mirror image called virtual rather than a real object behind the glass?

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

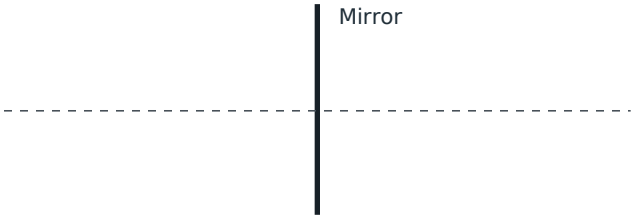

Echoes return at **0.004 s** and **0.006 s** with the same wave speed. **Compare ranges**. Does delay alone find mass?
Label the outgoing and returning paths.

Marzano check - circle: 1 2 3

07 Exit check

An object moves **0.50 m** toward a fixed mirror. **Find image movement** and change in object-image separation.

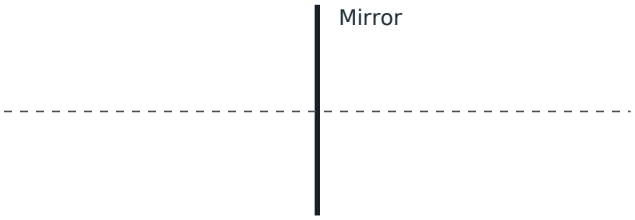

Add object / image or incident / reflected rays.

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

An object moves toward a fixed plane mirror at **1.2 m/s**. **Find image velocity relative** to the mirror and the rate at which object-image separation decreases.

Add object / image or incident / reflected rays.

Marzano check - circle: 1 2 3
