Charge and the electric car

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Explain charge interactions and trace an electric car's energy transfers.

SUCCESS CRITERIA - I can...

1. Predict attraction or repulsion from charge signs.
2. Distinguish charge from energy.
3. Trace energy from a battery to moving wheels.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use "charge" and "circuit" to explain your answer. Sentence starters are optional.

charge: a property responsible for electric interactions

circuit: a connected arrangement of electrical components

motor: a device converting electrical energy to mechanical output

01 Warm-up: bring back an earlier idea

An ideal blackbody's kelvin temperature becomes **3** times as large. How does its peak wavelength change?

Word help: blackbody = an ideal absorber/emitter used in a thermal-radiation model

Sentence starter: I notice ... . This supports ... because ... .

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: $E_{electrical} = E_{mechanical} + E_{thermal}$ + other transfers. Energy accounting for a motor with no net energy storage. A battery transfers energy; charge already exists in the wires.

Worked reasoning: Rubbing can transfer electrons between materials. If one isolated object gains charge **-3** units and another loses the same electrons, their charge changes add to zero.

Your turn: Draw before-and-after charge accounts for both objects. Distinguish transfer from creation of charge.

Sentence starter: In my work, I used ... to show ... . I labeled it ... .

Label charges and separation.

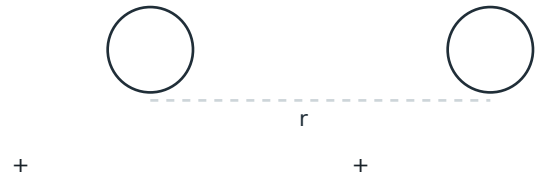

Object A Object B

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

Draw force arrows for two positive charges, then for a positive and a negative charge.

Sentence starter: In my work, I used ... to show ... . I labeled it ... .

Each circle represents one of the labeled objects or charges; r is their center-to-center separation.

Marzano check - circle: ① ② ③

Charge and the electric car

antocciphysics

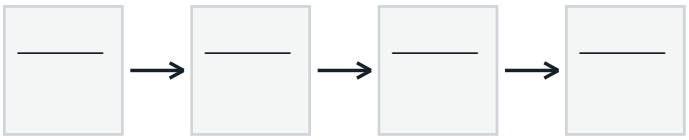

Continue down each column.

Sentence starters are optional. You may plan in any language.

04 Apply the physics

A battery-powered small classroom car begins moving. Put these stages in a sensible energy chain: car motion, stored chemical energy, electrical transfer and motor rotation. **Use arrows** and **add one branch** for energy transferred elsewhere.

Sentence starter: In my work, I used … to show … . I labeled it … .

Marzano check - circle: 1 2 3

05 Explain your reasoning

A student says the motor uses up the current so less returns to the battery. **Explain the mistake** for a steady series circuit.

Sentence starter: The step I would change is … . I would change it because I found … .

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

Two wave displacements at one point are **-4 mm** and **+8 mm**. **Find the resultant** and state whether they reinforce or partly cancel.
Show the signed contributions and their sum.

Sentence starter: I found … [unit]. This value means … in this situation.

Add signed displacements; label units.

Marzano check - circle: 1 2 3

07 Exit check

Predict the interaction between two negative charges.

Sentence starter: I predict … . I used … to make this prediction because … .

Label charges and separation.

Object A Object B

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

1. **Draw one attraction** between opposite charges and one repulsion between like charges.
2. **Explain whether** attraction alone proves both objects carry opposite net charges.

Sentence starter: I think … . I can point to …, which shows …, so … .

Label charges and separation.

Object A Object B

Marzano check - circle: 1 2 3
