Charge and the electric car

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Explain charge interactions and trace an electric car's energy transfers.

SUCCESS CRITERIA - I can...

1. Predict attraction or repulsion from charge signs.
2. Distinguish charge from energy.
3. Trace energy from a battery to moving wheels.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

An ideal blackbody's kelvin temperature becomes **3** times as large. How does its peak wavelength change?

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: $E_{electrical} = E_{mechanical} + E_{thermal}$ + other transfers. Energy accounting for a motor with no net energy storage. A battery transfers energy; charge already exists in the wires.

Worked reasoning: Rubbing can transfer electrons between materials. If one isolated object gains charge **-3** units and another loses the same electrons, their charge changes add to zero.

Your turn: Draw before-and-after charge accounts for both objects. Distinguish transfer from creation of charge.

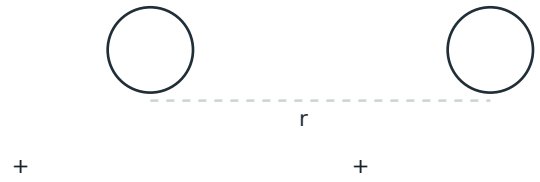

Label charges and separation.

Object A Object B

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

Draw force arrows for two positive charges, then for a positive and a negative charge.

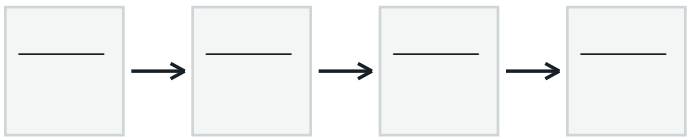

Each circle represents one of the labeled objects or charges; r is their center-to-center separation.

Marzano check - circle: ① ② ③

04 Apply the physics

A battery-powered small classroom car begins moving. Put these stages in a sensible energy chain: car motion, stored chemical energy, electrical transfer and motor rotation. **Use arrows** and **add one branch** for energy transferred elsewhere.

Marzano check - circle: ① ② ③

Charge and the electric car

antocciphysics

Continue down each column.

05 Explain your reasoning

A student says the motor uses up the current so less returns to the battery. **Explain the mistake** for a steady series circuit.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

Two wave displacements at one point are **-4 mm** and **+8 mm**. **Find the resultant** and state whether they reinforce or partly cancel.
Show the signed contributions and their sum.

A

B

Sum

Add signed displacements; label units.

Marzano check - circle: 1 2 3

07 Exit check

Predict the interaction between two negative charges.

Label charges and separation.

Object A Object B

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

1. **Draw one attraction** between opposite charges and one repulsion between like charges.
2. **Explain whether** attraction alone proves both objects carry opposite net charges.

Label charges and separation.

Object A Object B

Marzano check - circle: 1 2 3
