Theme and chassis layout

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Make a dimensioned layout that supports the circuit and drivetrain.

SUCCESS CRITERIA - I can...

1. Label component locations and clearances.
2. Use dimensions to check that parts fit.
3. Use measurements or observations to explain a structural choice.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “chassis” and “clearance” to explain your answer. Sentence starters are optional.

chassis: the frame that supports a vehicle’s components

clearance: space that lets neighboring parts avoid rubbing or colliding

constraint: a requirement or limit that the design must meet

01 Warm-up: bring back an earlier idea

A motor uses **4 W** for **6 s**. **Find electrical energy** and **name a possible non-mechanical output**.

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: available length = chassis length - components - clearances.
Use measured dimensions for a top view. Keep axles parallel and controls accessible. Get approval before tools/cuts.

Worked reasoning: A **20 cm** chassis reserves **6 cm** for the battery, **5 cm** for the motor and **2 cm** total for end clearances. The remaining **7 cm** must cover other components and gaps.

Your turn: 1. **Draw a dimensioned top view** showing these regions.
2. **Label any assumed dimensions rather** than pretending they were measured.

Sentence starter: In my work, I used … to show … . I labeled it … .

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

Draw a dimensioned top view of your chassis. **Label motor**, battery, switch, axle lines and wheel clearance. **Mark the intended forward direction**.

Sentence starter: In my work, I used … to show … . I labeled it … .

Marzano check - circle: ① ② ③

04 Apply the physics

A sample chassis is **18 cm** long. A battery needs **6 cm** and the motor region needs **5 cm** along its length. **Mark those regions** and **calculate the space left before** gaps. On your actual plan, add measured clearances and distinguish them from these sample dimensions.

Sentence starter: My design includes … . It does what is needed by … .

Marzano check - circle: ① ② ③

Theme and chassis layout

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Explain your reasoning

Your theme adds a heavy decoration far to one side. **Predict a possible effect** and propose a way to **test it** without claiming the effect is certain.

Sentence starter: I predict ... . I used ... to make this prediction because ... .

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

A total current of **16 A** splits between two identical parallel branches. **Find each branch current**. **Draw the stated circuit** and **label quantities relevant** to the question.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Draw the complete circuit and label shared nodes.

Marzano check - circle: 1 2 3

07 Exit check

Name the measurement you will verify before the first cut and **record the teacher checkpoint**.

Sentence starter: I notice ... . This supports ... because ... .

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

Return to the worked example in problem **2**. Fit the same components on an **18 cm** chassis. Propose two layouts and **name a measurement needed before** cutting.

Sentence starter: I notice ... . This supports ... because ... .

Marzano check - circle: 1 2 3
