Race, explain and transfer

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Compare your predicted result with measured performance. Use the results to explain your design choices.

SUCCESS CRITERIA - I can...

1. Report measured distance, time and average speed.
2. Compare actual speed with a stated prediction.
3. Use measurements or observations to explain three physical design choices.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “relative deviation” and “energy budget” to explain your answer. Sentence starters are optional.

relative deviation: difference from prediction compared with its magnitude

energy budget: an account of all energy stored and transferred

revision: a change made after checking evidence or reasoning

01 Warm-up: bring back an earlier idea

At unchanged wheel rpm, circumference becomes **6** times as large. **Compare ideal travel speed** and **state one real-world limitation**.

Word help: circumference = distance around the edge of a circle

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

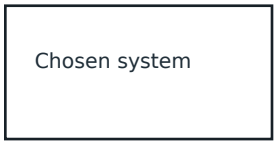

Reference: average speed = distance/time
relative deviation = |measured - predicted|/|predicted| × **100%**.
Prediction must be nonzero. **Record actual track**, starting method, and setup; this compares with a prediction, not symmetric percent difference.

Worked reasoning: A car covers **3 m** in **2 s**: average speed **1.5 m/s**. A complete explanation also uses its circuit, gearing, friction and measurements from repeated runs; one race time does not isolate a cause.

Your turn: Draw an energy-flow diagram from battery to motion and other transfers; annotate it with one actual result, clearly labeled as measured.

Sentence starter: In my work, I used … to show … . I labeled it … .

Draw and label all energy transfers across the boundary.

Stored energy change: _____ J

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

1. **Draw or annotate your final** car.
2. **Label three choices involving wheels**, gears, alignment, wiring or mass, then connect each to a physics idea.

Sentence starter: In my work, I used … to show … . I labeled it … .

Marzano check - circle: ① ② ③

04 Apply the physics

A supplied car covers **5 m** in **10 s**; its predicted speed was **0.60 m/s**. **Complete the comparison table**.
1. **Find measured speed** and use the **0.10 m/s** difference to **calculate percent deviation relative** to the prediction.
2. State whether it was faster or slower.

Sentence starter: Both … . They differ in … because … .

Distance (m)	Time (s)	Measured v	Predicted v
___	___	___	___

Marzano check - circle: ① ② ③

Race, explain and transfer

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Explain your reasoning

Use your actual race record to defend one successful design choice and **name one revision** for a future build. Cite data or a specific observation for each.

Sentence starter: My design includes … . It does what is needed by … .

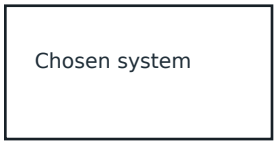

Marzano check - circle: ① ② ③

06 Review: connect an earlier idea

A device receives **60 J** mechanical energy at its shaft and produces electrical energy at its terminals. **Name it** and **name one possible loss**.
Label input, useful output and other energy transfers.

Sentence starter: In my work, I used … to show … . I labeled it … .

Draw and label all energy transfers across the boundary.

Stored energy change: _____ J

Marzano check - circle: ① ② ③

07 Exit check

Choose one problem on this sheet. Circle your current **1**, **2** or **3** self-check and **name the next step** that would improve your explanation.

Sentence starter: My design includes … . It does what is needed by … .

Problem chosen	What I can explain	Next time
___	___	___

Marzano check - circle: ① ② ③

08 STRETCH: test the prediction

1. Propose one redesign and **predict two possible effects**, including a tradeoff.
2. **State the measurement** that would support or challenge your prediction.

Sentence starter: I predict … . I used … to make this prediction because … .

Proposed change	Benefit / tradeoff	Test
___	___	___
___	___	___

Marzano check - circle: ① ② ③
