Electric car: launch the design

antocciphysics

UNIT 8 / DAY 1 / CPA

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Plan a safe team workflow and identify the car's energy pathway.

SUCCESS CRITERIA - I can...

1. Label the battery, switch, motor and connections.
2. Identify safety checkpoints before tools or power.
3. Connect a design choice with a measurable outcome.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

A stationary coil has constant magnetic flux **0.003 Wb** through each turn. Does that constant flux produce sustained induced emf? Explain.

Marzano check - circle: ① ② ③

02 Worked example: explain the prediction

Reference: average speed = distance/elapsed time. Use your own design and measurements. Battery → motor → drivetrain. Follow teacher training for tools and hot materials.

Worked reasoning: You can test a statement about a design if it names something you can measure. "The car is fast" can become "The car travels **3 m** in under **2 s** on this level track." This requires an average speed above **1.5 m/s**.

Your turn: Draw a test track with start, finish, distance and timing method labeled.

Start Finish

Distance: ____ Timing method: _____

Marzano check - circle: ① ② ③

03 Read and explain the diagram or equation

1. **Sketch your proposed car**.
2. **Label the battery**, switch, motor, driven axle and wheels.
3. **Add a theme** that will not obstruct moving parts.

Top view: the large rectangle is the chassis; small rectangles are wheels; the two crossbars are axles.

Marzano check - circle: ① ② ③

04 Apply the physics

Set up your build team: **choose a build lead**, safety checker and recorder. **Complete the role table**. **Name the teacher checkpoints required** before cutting, drilling, soldering and the first powered test. Leave approvals blank until they happen.

Role	Team member	Approval / checkpoint
Build lead	____	____
Safety checker	____	____
Recorder	____	____

Marzano check - circle: ① ② ③

Electric car: launch the design

antocciphysics

Continue down each column.

05 Explain your reasoning

1. **Write one measurable design goal** and one requirement or limit.
2. **Explain how you** will measure the goal instead of judging only by appearance.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

An ideal series loop has supply **24 V**. One component drops **4 V**. **Find the other component's drop**. **Draw the stated circuit** and **label quantities relevant** to the question.

Draw the complete circuit and label shared nodes.

Marzano check - circle: 1 2 3

07 Exit check

Complete: The part that converts electrical energy into rotation is ____. Before a powered test, I will check ____.

Check / criterion	Measurement	Decision rule
___	___	___
___	___	___

Marzano check - circle: 1 2 3

08 STRETCH: test the prediction

1. Propose a second success criterion that could conflict with speed, such as straight tracking or reliability.
2. **Describe how both would be** measured.

Check / criterion	Measurement	Decision rule
___	___	___
___	___	___

Marzano check - circle: 1 2 3
