Free-body diagrams

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Draw only the external forces on one chosen object.

SUCCESS CRITERIA - I can...

1. Choose one object and list its external interactions.
2. Draw force arrows in physically correct directions.
3. Remove velocity and net force as extra interaction arrows.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

An a-versus-F_{net} graph has slope 1.5 $(m/s^2)/N$. Find mass and acceleration at 2.5 N. Explain why a driving-force plot can have an offset.

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $\Sigma F_x = ma_x$; $\Sigma F_y = ma_y$; $F_g = mg$.
Draw only forces on the chosen object. x and y name directions. Use g = 9.8 N/kg unless another value is given.

Worked reasoning: A lamp hangs motionless from one vertical cable. With weight 12 N down, the cable tension is 12 N up. Only forces acting on the lamp belong in its diagram.

Your turn: Draw the lamp as a labeled point with its two force arrows. Explain why its force on the cable is not another arrow on this diagram.

Add and label force arrows.

Lamp: draw the two 12 N forces acting on it.

Marzano check - circle: ① ② ③

03 Motionless lamp

A 2 kg lamp hangs at rest from one vertical rope. Use g = 9.8 N/kg. Draw and label the forces on the lamp, including their magnitudes.

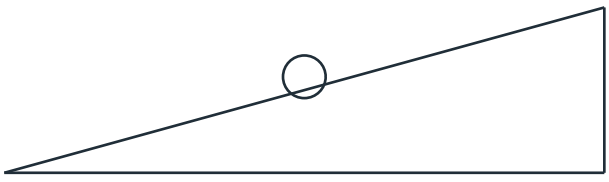

Add and label force arrows.

The dot represents the object. Object: 2 kg lamp

Marzano check - circle: ① ② ③

04 A rough ramp

A block rests on a rough incline. Add weight, normal force and static friction to the ramp model. Explain why weight points vertically downward rather than perpendicular to the surface.

Marzano check - circle: ① ② ③

Free-body diagrams

antocciphysics

Continue down each column.

05 Critique the extra arrows

A student's free-body diagram includes weight, normal force, friction, a "velocity force," and an extra "net force." Redraw a correct diagram for a box sliding right on a rough level floor after release. Explain each removal.

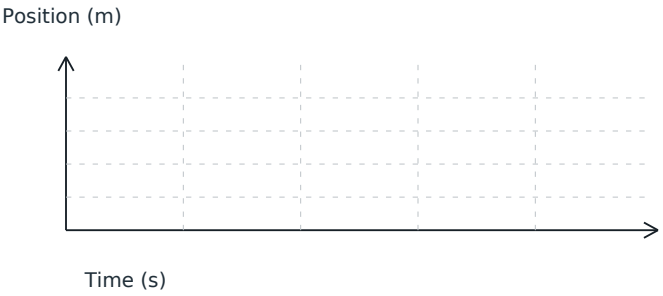

Add and label force arrows.

Box after release; it slides right.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

A straight position-time segment goes from (2 s, -4 m) to (6 s, 20 m). Find velocity, interpret its units and predict x at 8 s if motion continues.
Label the model with the given positions and any prediction.

Marzano check - circle: 1 2 3

07 Exit check

A box slides to the left on a rough level floor after release. Draw all forces; state what can be concluded about vertical and horizontal acceleration.

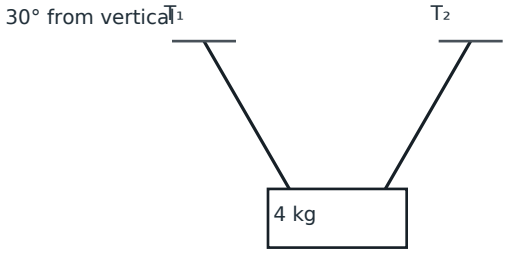

Add and label force arrows.

Box slides left after release on a rough level floor.

Marzano check - circle: 1 2 3

08 STRETCH: test the model

Two identical cables support a stationary 4 kg object. Each cable is 30° from vertical. Use g = 10 N/kg. Add force arrows to the model and calculate the tension in each cable.

Marzano check - circle: 1 2 3
