Gravity above the surface

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use distance from a planet's center to compare fields at altitude.

SUCCESS CRITERIA - I can...

1. Use r=R+h rather than altitude alone.
2. Compare fields with the inverse-square relation.
3. Explain why orbit is not a zero-gravity region.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use "altitude" and "radius" to compare your model or result. Sentence starters are optional.

altitude: height above a reference surface

radius: distance from the center to the edge of a circle or sphere

field: a description of an influence at each location

01 Warm-up: bring back an earlier idea

Two fixed masses attract with 75 N at separation r.
Find the force at separation 5 r and explain the factor.

Word help: separation = distance between the specified objects or centers

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: ① ② ③

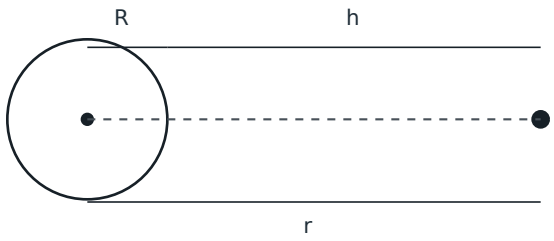

02 Worked example: explain the model

Reference: $r = R + h$; $g_h/g_{surface} = [R/(R + h)]^2$.
R is planet radius; h is altitude. g_h is field strength at altitude h.

Worked reasoning: At altitude h=2 R above a planet's surface, center distance is r=R+h=3 R. A surface field of 18 N/kg becomes 18/9=2 N/kg.

Your turn: Draw the radius and altitude as different line segments.
Mark the full center-to-object distance.

Sentence starter: Both … . They differ in … because … .

Measure r from the center: r = R + h.

Marzano check - circle: ① ② ③

Gravity above the surface

antocciphysics

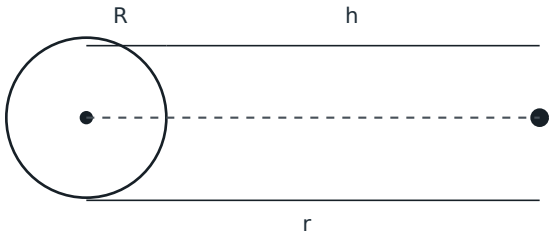

Continue down each column.

Sentence starters are optional. You may plan in any language.

03 Read and interpret the model

A satellite is one planet-radius above the surface.
Label R, h and r on a sketch. What is r in units of R?

Sentence starter: My design shows … . It meets the requirement by … .

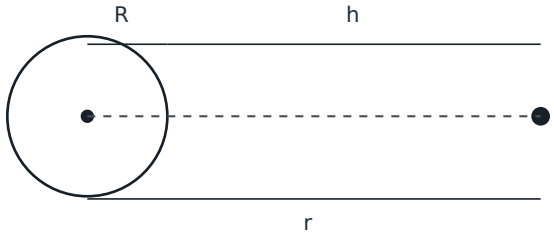

Label surface radius R, altitude h and center distance r.

Marzano check - circle: 1 2 3

04 Apply the physics

Surface field is 12 N/kg. At height h=R, center distance doubles.
Calculate the new field: 12÷4.

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: 1 2 3

05 Explain your reasoning

Explain why an astronaut at modest orbital altitude can float even though gravity is only slightly weaker there.

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: 1 2 3

Gravity above the surface

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

06 Review: connect an earlier idea

Maximum static friction is 60 N. A 24 N push leaves a box still.
Find actual friction. A 72 N push starts sliding with 48 N kinetic friction; find net force.
Draw the forces on the chosen object and label their sources.

Word help: friction = a contact force opposing relative sliding or its tendency

Sentence starter: I found ... [unit]. This value means ... in this situation.

Add and label force arrows.

Marzano check - circle: ① ② ③

07 Exit check

A planet has surface g=9 N/kg. At center distance 3 R, what isg?

Sentence starter: My design shows ... . It meets the requirement by ... .

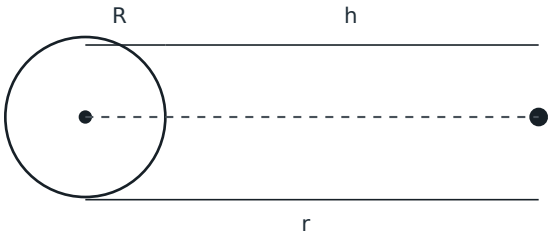

Field / surface field	r / R	h / R
___	___	___
___	___	___

Marzano check - circle: ① ② ③

08 STRETCH: test the model

A planet's field is 16 N/kg at its surface. At what altitude in planet radii is it 4 N/kg?
Use a sketch.

Sentence starter: My design shows ... . It meets the requirement by ... .

Marzano check - circle: ① ② ③
