Gravity above the surface

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use distance from a planet's center to compare fields at altitude.

SUCCESS CRITERIA - I can...

1. Use r=R+h rather than altitude alone.
2. Compare fields with the inverse-square relation.
3. Explain why orbit is not a zero-gravity region.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

Two fixed masses attract with 75 N at separation r. Find the force at separation 5 r and explain the factor.

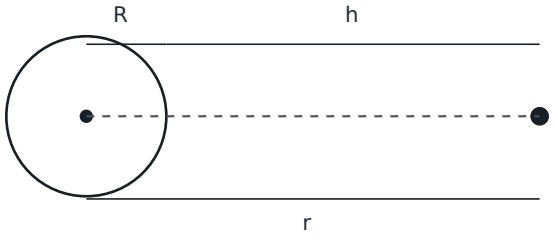

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $r = R + h$; $g_h/g_{surface} = [R/(R + h)]^2$.
R is planet radius; h is altitude. g_h is field strength at altitude h.

Worked reasoning: At altitude h=2 R above a planet's surface, center distance is r=R+h=3 R. A surface field of 18 N/kg becomes 18/9=2 N/kg.

Your turn: Draw the radius and altitude as different line segments. Mark the full center-to-object distance.

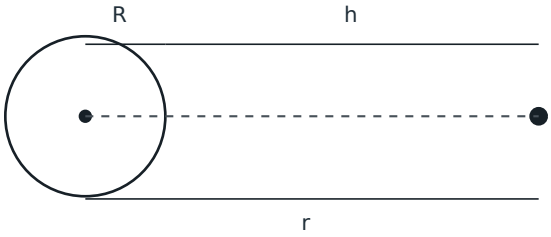

Measure r from the center: r = R + h.

Marzano check - circle: ① ② ③

03 Read and interpret the model

A satellite is one planet-radius above the surface. Label R, h and r on a sketch. What is r in units of R?

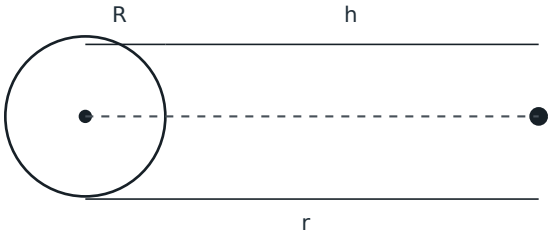

Label surface radius R, altitude h and center distance r.

Marzano check - circle: ① ② ③

04 Apply the physics

Surface field is 12 N/kg. At height h=R, center distance doubles. Calculate the new field: 12÷4.

Marzano check - circle: ① ② ③

Gravity above the surface

antocciphysics

Continue down each column.

05 Explain your reasoning

Explain why an astronaut at modest orbital altitude can float even though gravity is only slightly weaker there.

Marzano check - circle: ① ② ③

06 Review: connect an earlier idea

Maximum static friction is 60 N. A 24 N push leaves a box still. Find actual friction. A 72 N push starts sliding with 48 N kinetic friction; find net force.
Draw the forces on the chosen object and label their sources.

Add and label force arrows.

Marzano check - circle: ① ② ③

07 Exit check

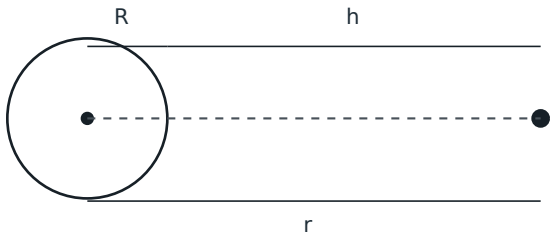

A planet has surface g=9 N/kg. At center distance 3 R, what isg?

Field / surface field	r / R	h / R
___	___	___
___	___	___

Marzano check - circle: ① ② ③

08 STRETCH: test the model

A planet's field is 16 N/kg at its surface. At what altitude in planet radii is it 4 N/kg? Use a sketch.

Marzano check - circle: ① ② ③
