Gravity above the surface

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use distance from a planet's center to compare fields at altitude.

SUCCESS CRITERIA - I can...

1. Use r=R+h rather than altitude alone.
2. Compare fields with the inverse-square relation.
3. Explain why orbit is not a zero-gravity region.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

For fixed masses, what separation multiplier makes gravity 1/9 of its original value? What multiplier is needed if both masses also become 5 times as large?

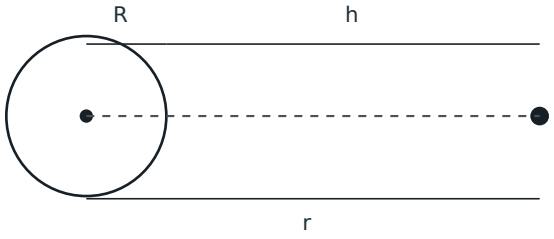

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $r = R + h$; $g_h/g_{surface} = [R/(R + h)]^2$.
R is planet radius; h is altitude. g_h is field strength at altitude h.

Worked reasoning: At altitude h=2 R above a planet's surface, center distance is r=R+h=3 R. A surface field of 18 N/kg becomes 18/9=2 N/kg.

Your turn: Draw the radius and altitude as different line segments. Mark the full center-to-object distance.

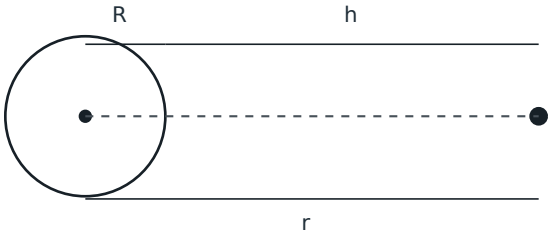

Measure r from the center: r = R + h.

Marzano check - circle: ① ② ③

03 Read and interpret the model

A satellite is one planet-radius above the surface. Label R, h and r on a sketch. What is r in units of R?

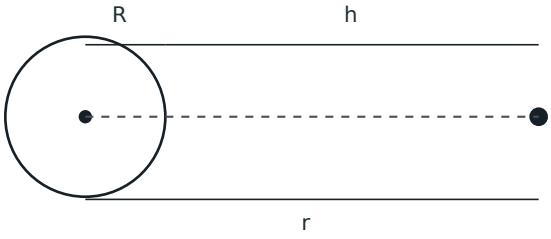

Label surface radius R, altitude h and center distance r.

Marzano check - circle: ① ② ③

04 Apply the physics

For Earth use$R=6.4\times10^6$ m, $g_{surface}=9.8$ N/kg. Find g at $h=4.0\times10^5$ m and at h=R.

Marzano check - circle: ① ② ③

Gravity above the surface

antocciphysics

Continue down each column.

05 Explain your reasoning

Explain why an astronaut at modest orbital altitude can float even though gravity is only slightly weaker there.

Marzano check - circle: ① ② ③

06 Review: connect an earlier idea

A 4 kg box has μ_s=0.50 and μ_k=0.40 on a level floor; g=9.8. Compare pushes of 8 N and 24 N, starting from rest. Find actual friction and acceleration.
Draw the forces on the chosen object and label their sources.

Add and label force arrows.

Marzano check - circle: ① ② ③

07 Exit check

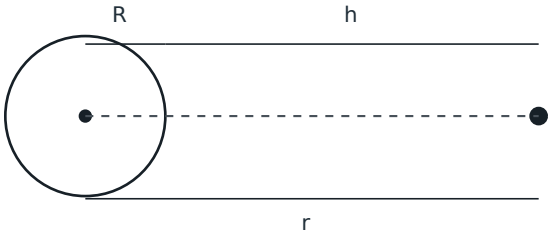

At what altitude in units ofR is field one quarter of surface value? At what altitude is it one ninth?

Field / surface field	r / R	h / R
___	___	___
___	___	___

Marzano check - circle: ① ② ③

08 STRETCH: test the model

Find the altitude h/R where a spherical planet's field is 10% of the surface value. Explain why h/R is not √10.

Marzano check - circle: ① ② ③
