Angled and negative work

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use force direction to determine work's sign and size.

SUCCESS CRITERIA - I can...

1. Compare force direction with displacement.
2. Use the parallel force component.
3. Explain positive, negative and zero work.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use "work" and "component" to explain your model or result. Sentence starters are optional.

work: energy transferred by a force along a displacement

component: the part of a vector along one chosen axis

perpendicular: at a right angle, 90°, to a line or surface

01 Warm-up: bring back an earlier idea

A fixed impulse changes a target's sideways velocity by 0.03 m/s.
Find the modeled shift after 500 s and state a limitation.

Word help: impulse = net force acting over time; change in momentum

Sentence starter: My claim is ... . The diagram/data show ..., so ... .

Marzano check - circle: ① ② ③

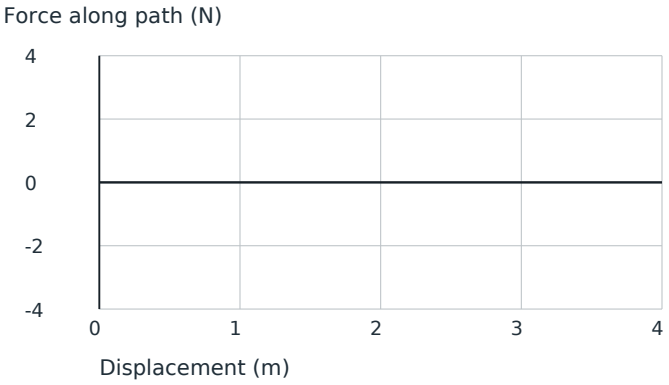

02 Worked example: explain the model

Reference: $W = Fd\cos\theta = F_{parallel}\, d$.
θ is between force and displacement. CPA uses the supplied parallel component. Opposite force gives negative work.

Worked reasoning: A box moves 4 m right while friction acts 3 N left. Friction's work is -3×4=-12 J because force opposes displacement.

Your turn: Draw force and displacement arrows. Add a perpendicular upward force and state its work for this horizontal motion.

Sentence starter: The ... in my model represents ... . Its label shows ... .

Marzano check - circle: ① ② ③

Angled and negative work

antocciphysics

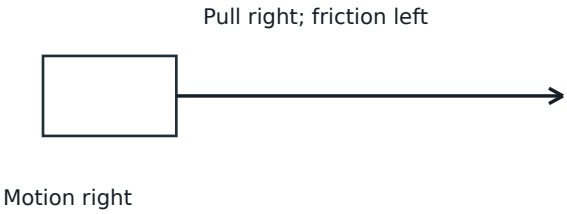

Continue down each column.

Sentence starters are optional. You may plan in any language.

03 Read and interpret the model

The box moves right. Classify work by a rightward pull, leftward friction and upward normal force.

Sentence starter: I notice … . This supports … because … .

The rectangle is the box. Add the requested force and displacement labels.

Marzano check - circle: 1 2 3

04 Apply the physics

A rope pulls a crate 3 m right. Its forward force component is 8 N; friction is 2 N left.
Draw the force components and displacement.
Calculate rope work, friction work and net work.

Sentence starter: I found … [unit]. This value means … in this situation.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3

05 Explain your reasoning

A force perpendicular to velocity can bend a path without changing speed.
Explain using work.

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: 1 2 3

Angled and negative work

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

06 Review: connect an earlier idea

Two carts separate from rest with no external horizontal impulse. One has momentum 24 kg·m/s left.
Find the other's momentum.
Use before and after snapshots to organize the momentum account.

Word help: external = acting from outside the chosen system

Sentence starter: I found … [unit]. This value means … in this situation.

Before	After

Label mass, velocity and momentum.

Marzano check - circle: 1 2 3

07 Exit check

A 5 N friction force acts opposite a 4 m displacement.
State work with sign and units.

Sentence starter: I notice … . This supports … because … .

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3

08 STRETCH: test the model

A pull does +20 J and friction does -8 J.
Draw work-transfer arrows and find net work. What changes if friction is twice as large over the same path?

Sentence starter: I found … [unit]. This value means … in this situation.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3
