Spring potential energy

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Calculate stored spring energy and distinguish it from force.

SUCCESS CRITERIA - I can...

1. Use displacement in meters.
2. Apply the squared relationship for spring energy.
3. Explain how stored energy can become motion.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “compression” and “spring constant” to compare your model or result. Sentence starters are optional.

compression: shortening or squeezing relative to an unstressed length

spring constant: how much an ideal spring’s force changes per stretch

potential energy: energy associated with the configuration of interacting objects

01 Warm-up: bring back an earlier idea

A pendulum loses 15 J gravitational energy while descending. Neglect losses.
Find its kinetic-energy gain.

Word help: pendulum = an object that swings about a fixed support

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: ① ② ③

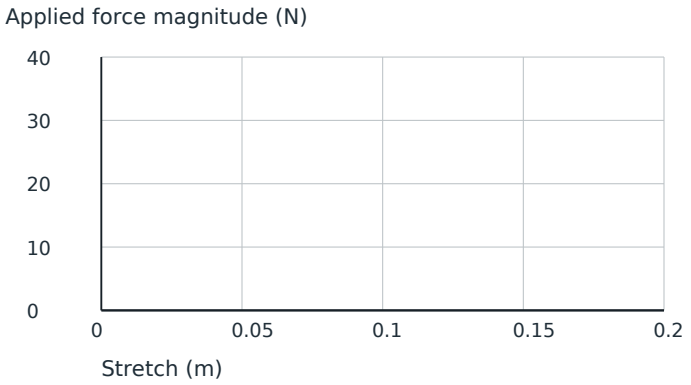

02 Worked example: explain the model

Reference: $U_s = \frac{1}{2}kx^2$; $|F_{spring}| = k|x|$.
s means spring. Compression and stretch both store energy relative to the natural length; energy and force are different quantities.

Worked reasoning: A spring with k=200 N/m stretched 0.10 m stores $\frac{1}{2}kx^2$=1 J. Doubling stretch to 0.20 m stores 4 J, not 2 J.

Your turn: Draw force-versus-stretch triangles and compare their areas.

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: ① ② ③

Spring potential energy

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

03 Read and interpret the model

The same spring is displaced x and 2 x.
Compare stored energies and force magnitudes.

Sentence starter: Both … . They differ in … because … .

Mark equilibrium and displacement x.

The zigzag is the spring; the rectangle is the attached block.

Marzano check - circle: 1 2 3

04 Apply the physics

Use k=100 N/m and x=0.20 m.
Find x^2, then $U=\frac{1}{2}\times 100\times x^2$.

Sentence starter: I found … [unit]. This value means … in this situation.

Mark equilibrium and displacement x.

Marzano check - circle: 1 2 3

05 Explain your reasoning

Why is energy positive for both positive and negative x even though spring force reverses?

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

A 4 N friction force opposes a 6 m displacement.
Find work, including sign and units.
Label force and displacement, including their relative direction.

Word help: work = energy transferred by a force along a displacement

Sentence starter: I found … [unit]. This value means … in this situation.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3

Spring potential energy

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

07 Exit check

A spring stores 3 J at a certain compression. How much does it store at double compression?

Sentence starter: I notice … . This supports … because … .

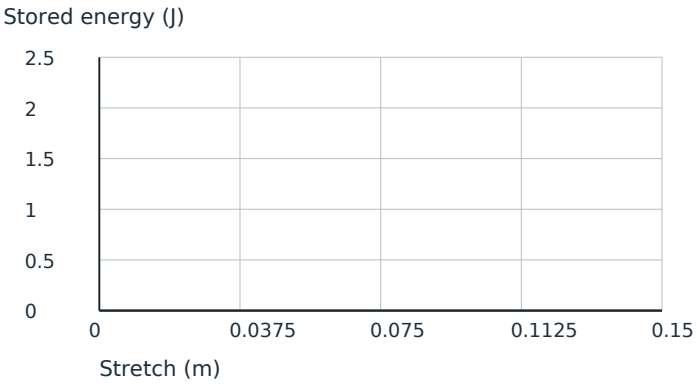

Mark equilibrium and displacement x.

Marzano check - circle: 1 2 3

08 STRETCH: test the model

Find the energy for stretches 0.05, 0.10, 0.15 m when k=200 N/m.
Sketch the energy trend.

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: 1 2 3
