Work along a displacement

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Calculate work and identify when a force does no work.

SUCCESS CRITERIA - I can...

1. Identify the force component along displacement.
2. Use meters and newtons to obtain joules.
3. Distinguish effort from mechanical work on an object.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

A simplified deflection adds 0.3 m/s sideways for a lead time of 50 s. Find the modeled shift and name an assumption.

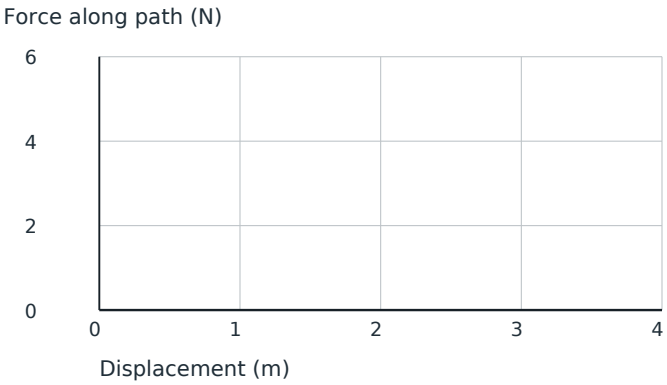

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: W = Fd.
Constant force parallel to displacement; W is work. No displacement means no work on the object by that force.

Worked reasoning: A constant 5 N pull acts along a 3 m displacement. Work is Fd=15 J. The object must move for this force to do mechanical work.

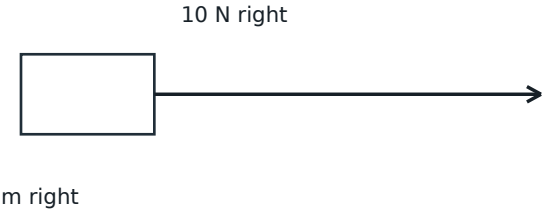

Your turn: Draw the force and displacement arrows. Show the 15 J as area on a force-versus-position graph.

Marzano check - circle: ① ② ③

03 Read and interpret the model

A box moves 4 m right while a 10 N force acts right. Draw force and displacement arrows; predict the sign of work.

The rectangle is the box. Add the requested force and displacement labels.

Marzano check - circle: ① ② ③

04 Apply the physics

You pull a box with the 10 N horizontal force shown in question 3. Find the work over 4 m, then over 2 m. Draw each force and displacement; explain why the shorter trip changes the work.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: ① ② ③

Work along a displacement

antocciphysics

Continue down each column.

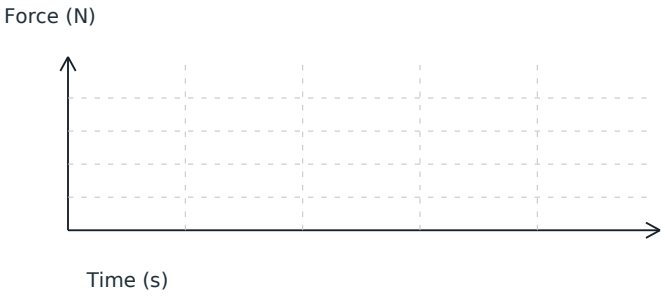

05 Explain your reasoning

A student holds a heavy bag still. Is the upward support force doing mechanical work on the bag during the hold? Explain without denying the student feels tired.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

The same object stops from the same speed, but the stopping time is 4 times the original. Compare average stopping-force magnitudes.
Show the signed impulse on the force-time model.

Marzano check - circle: 1 2 3

07 Exit check

A 3 N force acts forward through 5 m. Find its work.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3

08 STRETCH: test the model

Design two force-and-distance pairs doing 20 J of positive work. Sketch both.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3
