Transfer: energy and work

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Choose and justify energy methods in new physical situations.

SUCCESS CRITERIA - I can...

1. Choose the correct energy terms and units.
2. Show a consistent numerical balance.
3. Explain model assumptions and limitations.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “work” and “power” to explain your model or result. Sentence starters are optional.

work: energy transferred by a force along a displacement

power: rate of energy transfer

energy budget: an account of all energy stored and transferred

01 Warm-up: bring back an earlier idea

At fixed speed, mass becomes 3 times as large while energy-coupling fraction becomes 1/5 as large. **Compare** coupled energy.

Sentence starter: Both ... . They differ in ... because ... .

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $W_{net} = \Delta K$; $K = \frac{1}{2}mv^2$; $U_g = mgh$; $U_s = \frac{1}{2}kx^2$
$P = W/\Delta t$.
$g = 10$ N/kg where needed. Select relationships for the stated system and conditions.

Worked reasoning: A 2 kg cart drops 2 m with g =10, then loses 10 J to friction. From rest, its final kinetic energy is 40-10=30 J, so speed $\sqrt{30} \approx 5.48$ m/s.

Your turn: Draw a complete energy account and a sketch identifying where friction acts.

Sentence starter: The ... in my model represents ... . Its label shows ... .

Initial	Transfers	Final

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: ① ② ③

Read down the left column, then down the right. Use the open space to draw, calculate and explain.

Transfer: energy and work

antocciphysics

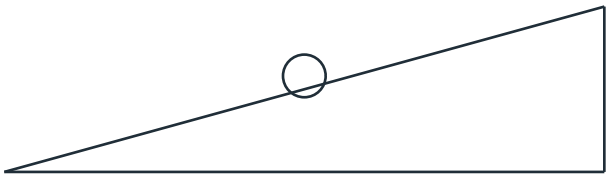

Continue down each column.

Sentence starters are optional. You may plan in any language.

03 Read and interpret the model

A cart coasts down a frictionless ramp from rest.
Explain which energy decreases and which increases.
Mark the vertical height in the sketch.

Sentence starter: Under the assumption ..., the evidence ... supports ... because ... .

The marker represents the object on the sloping surface.

Marzano check - circle: 1 2 3

04 Apply the physics

A 2 kg cart starts from rest 3 m above the bottom of a ramp. It reaches the bottom at 4 m/s, then compresses a 200 N/m spring on a frictionless level section.
Use g = 10 N/kg. Complete the energy account to find the ramp's energy loss and maximum spring compression.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Initial	Transfers	Final

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: 1 2 3

05 Explain your reasoning

A motor supplies 100 J while the load gains 70 J mechanical energy.
Explain where the other 30 J might go and whether energy was destroyed.

Sentence starter: Under the assumption ..., the evidence ... supports ... because ... .

Marzano check - circle: 1 2 3

Transfer: energy and work

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

06 Review: connect an earlier idea

A ball is thrown vertically upward at 20 m/s from h=0.
Use g=10 and neglect drag.
Find maximum height by energy.
Show the energy changes and transfers; label units.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Initial **Transfers** **Final**

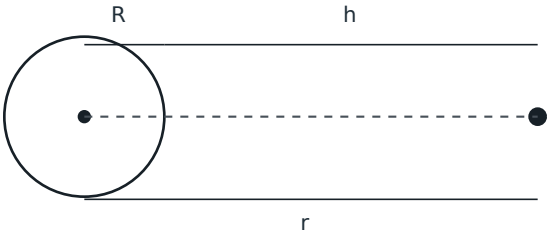

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: 1 2 3

07 Exit check

A simulated source has GM=200 m³/s². At r=4 m, find escape speed and state two assumptions.
Use the energy model to show the quantities you compare; label units and any unknowns.

Sentence starter: Both ... . They differ in ... because ... .

Marzano check - circle: 1 2 3

08 STRETCH: test the model

A 3 kg cart starts at 2 m/s, drops 1 m, then compresses a spring k=200 N/m. Friction removes 11 J before maximum compression; g=10.
Find compression and check the final energy account.
Use the energy model to show the quantities you compare; label units and any unknowns.

Sentence starter: Both ... . They differ in ... because ... .

Initial **Transfers** **Final**

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: 1 2 3
