Work along a displacement

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Calculate work and identify when a force does no work.

SUCCESS CRITERIA - I can...

1. Identify the force component along displacement.
2. Use meters and newtons to obtain joules.
3. Distinguish effort from mechanical work on an object.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

Keep impulse fixed, multiply target mass by 3 and lead time by 5. Compare the modeled transverse shift using an equation.

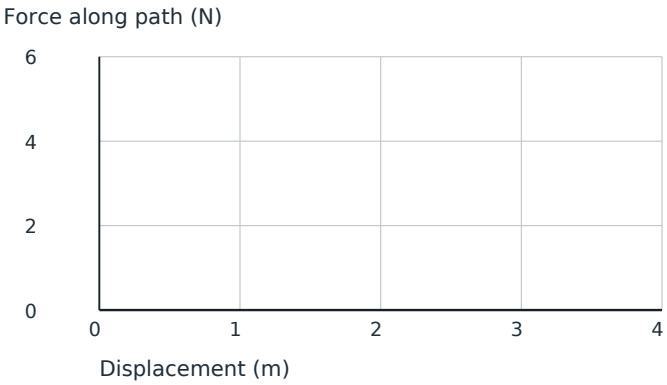

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: W = Fd.
Constant force parallel to displacement; W is work. No displacement means no work on the object by that force.

Worked reasoning: A constant 5 N pull acts along a 3 m displacement. Work is Fd=15 J. The object must move for this force to do mechanical work.

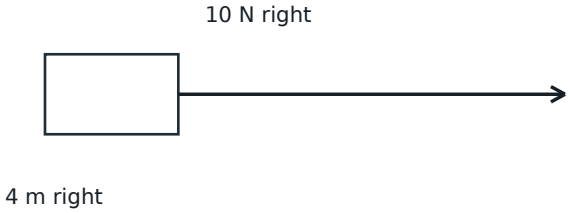

Your turn: Draw the force and displacement arrows. Show the 15 J as area on a force-versus-position graph.

Marzano check - circle: ① ② ③

03 Read and interpret the model

A box moves 4 m right while a 10 N force acts right. Draw force and displacement arrows; predict the sign of work.

The rectangle is the box. Add the requested force and displacement labels.

Marzano check - circle: ① ② ③

04 Apply the physics

A cart is pulled forward with a constant 18 N force over 5 m. A 6 N friction force opposes the motion. Draw both forces and the displacement. Calculate each force's work and their net work.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: ① ② ③

Work along a displacement

antocciphysics

Continue down each column.

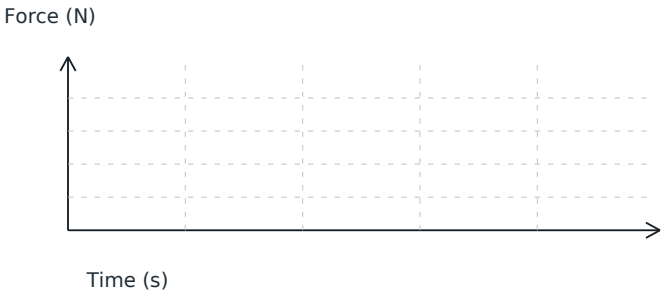

05 Explain your reasoning

A student holds a heavy bag still. Is the upward support force doing mechanical work on the bag during the hold? Explain without denying the student feels tired.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

A 4 kg object slows from 8 to 4 m/s in 1.5 s. Find impulse and average net force. Repeat the force calculation for the same velocity change over 3 s.
Show the signed impulse on the force-time model.

Marzano check - circle: 1 2 3

07 Exit check

A force does 72 J over 3 m parallel to motion. Find force. If displacement were zero, what work would that force do?

Add force and displacement arrows; label the angle.

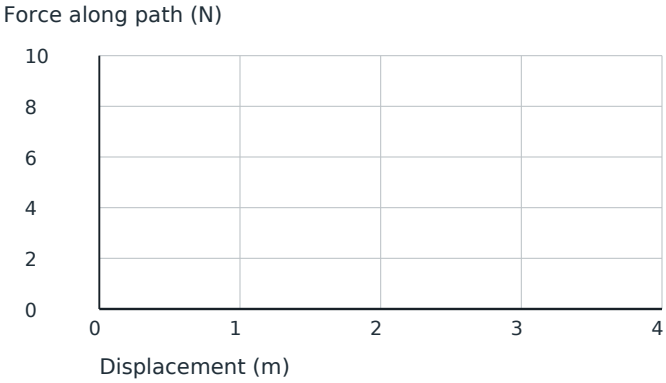

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3

08 STRETCH: test the model

A varying force rises linearly from 2 to 8 N over 4 m. Find work from a graph and compare with using only the final force.

Marzano check - circle: 1 2 3
