Hooke’s law

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Connect spring displacement with restoring force.

SUCCESS CRITERIA - I can...

1. Measure displacement from the natural length.
2. Use spring constant in N/m.
3. Point the spring force back toward equilibrium.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

A point-mass pendulum drops 0.6 m vertically from rest. Use g=10 and neglect drag. Find bottom speed.

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $F_{spring} = -kx$; $|F_{spring}| = k|x|$.
x is displacement from natural length; k is spring constant. The force restores the spring, within its linear range.

Worked reasoning: A spring with k=100 N/m stretches 0.03 m, giving force magnitude kx=3 N. Its force on the attached object points toward equilibrium.

Your turn: Sketch equilibrium and stretched positions, then draw the restoring-force arrow.

Mark equilibrium and displacement x.

Marzano check - circle: ① ② ③

03 Read and interpret the model

A spring is stretched right. Draw the force it exerts on the attached block. What changes if compressed left?

Mark equilibrium and displacement x.

The zigzag is the spring; the rectangle is the attached block.

Marzano check - circle: ① ② ③

04 Apply the physics

A stationary 1 kg load stretches a vertical spring 0.050 m. Use g = 9.8 N/kg. Find the spring constant, then its force magnitude at a 0.12 m stretch. Sketch and label the load’s forces for the stationary case.

Add and label force arrows.

Marzano check - circle: ① ② ③

Hooke’s law

antocciphysics

Continue down each column.

05 Explain your reasoning

A student says k doubles when the stretch doubles. Explain which quantity actually doubles for the same ideal spring.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

A force parallel to motion does 24 J over 4 m. Find its size. What work does the same force do with zero displacement?
Label force and displacement, including their relative direction.

Add force and displacement arrows; label the angle.

Force: ____ N Displacement: ____ m

Marzano check - circle: 1 2 3

07 Exit check

With right positive, k=150 N/m and x=-0.08 m, find signed spring force. Mark the displacement from equilibrium and draw the restoring-force direction.

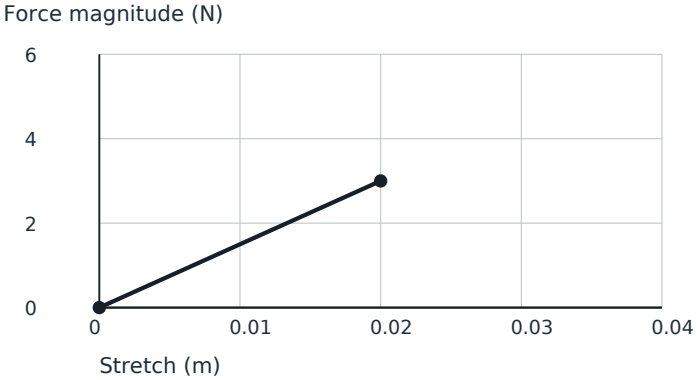

Mark equilibrium and displacement x.

Marzano check - circle: 1 2 3

08 STRETCH: test the model

A spring graph passes through (x=0.02 m, F=3 N) and the origin. Find k, then predict restoring force at displacement x=-0.04 m using F=-kx. Mark the displacement from equilibrium and draw the restoring-force direction.

Marzano check - circle: 1 2 3
