Heat is not temperature

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Distinguish temperature from energy transferred because of a temperature difference.

SUCCESS CRITERIA - I can...

1. Compare temperature with thermal energy.
2. Identify the direction of spontaneous heat transfer.
3. Explain why amount and material matter.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “heat” and “temperature” to compare your model or result. Sentence starters are optional.

heat: energy transferred because of a temperature difference

temperature: a measure of thermal state; it is not an energy amount

thermal energy: internal energy associated with microscopic motion/interactions

01 Warm-up: bring back an earlier idea

For fixed GM, launch radius becomes 9 times as large. **Compare** ideal escape speeds and name the equation.

Word help: radius = distance from the center to the edge of a circle or sphere

Sentence starter: Both ... . They differ in ... because ... .

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $Q = mc\,\Delta T$.
For heating without a phase change: Q is transferred heat, m is mass, c is specific heat. Heat and temperature are different quantities.

Worked reasoning: A cup and a bathtub can both be at 40°C. Equal temperature does not imply equal internal energy: amount and type of material also matter.

Your turn: Draw equal temperature indicators but different amounts of water.
Predict heat-flow direction if the water samples are brought into thermal contact at the same temperature.

Sentence starter: Both ... . They differ in ... because ... .

Sample A

Sample B

Label temperatures and draw energy-transfer arrows.

Marzano check - circle: ① ② ③

Read down the left column, then down the right. Use the open space to draw, calculate and explain.

Heat is not temperature

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

03 Read and interpret the model

A cup and a bathtub contain the same substance at 40°C. Are their temperatures equal? Must their total internal energies be equal?

Sentence starter: I notice … . This supports … because … .

Cup: 40°C

Tub: 40°C

Each outline represents the labeled sample or container.

Marzano check - circle: 1 2 3

04 Apply the physics

Two containers hold the same liquid at the same temperature. Container B has three times as much liquid by mass.
Compare the energy needed to warm each by the same temperature change.
Label the model and state your assumptions.

Sentence starter: Both … . They differ in … because … .

Sample A

Sample B

Label temperatures and draw energy-transfer arrows.

Marzano check - circle: 1 2 3

05 Explain your reasoning

A student says “cold flows into a hot drink.” Rewrite the explanation in terms of energy transfer.

Sentence starter: My design shows … . It meets the requirement by … .

Marzano check - circle: 1 2 3

Heat is not temperature

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

06 Review: connect an earlier idea

A point-mass pendulum drops 0.8 m vertically from rest.
Use g=10 and neglect drag.
Find bottom speed.
Show the energy changes and transfers; label units.

Word help: pendulum = an object that swings about a fixed support

Sentence starter: I found ... [unit]. This value means ... in this situation.

Initial | **Transfers** | **Final**

Draw bars or transfer arrows; label forms and joules.

Marzano check - circle: 1 2 3

07 Exit check

Can equal-temperature objects still contain different internal energies?
Give two reasons.

Sentence starter: Both ... . They differ in ... because ... .

Sample A | Sample B

Label temperatures and draw energy-transfer arrows.

Marzano check - circle: 1 2 3

08 STRETCH: test the model

Two equal masses of water start at 20°C and 60°C and mix in isolation without phase change.
Find final temperature, then explain why this averaging rule would fail for unequal masses.

Sentence starter: Under the assumption ..., the evidence ... supports ... because ... .

Sample A | Sample B

Label temperatures and draw energy-transfer arrows.

Marzano check - circle: 1 2 3
