The electromagnetic spectrum

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Relate electromagnetic wavelength, frequency and propagation.

SUCCESS CRITERIA - I can...

1. Use c=fλ in vacuum.
2. Order spectral regions by wavelength.
3. Distinguish electromagnetic from mechanical waves.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “electromagnetic” and “spectrum” to explain your model or result. Sentence starters are optional.

electromagnetic: involving coupled electric and magnetic fields

spectrum: a range arranged by frequency or wavelength

vacuum: space with negligible matter

01 Warm-up: bring back an earlier idea

An echo travels 100 m on its full out-and-back path. **Find** the wall’s distance.

Word help: echo = a sound received after reflection

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

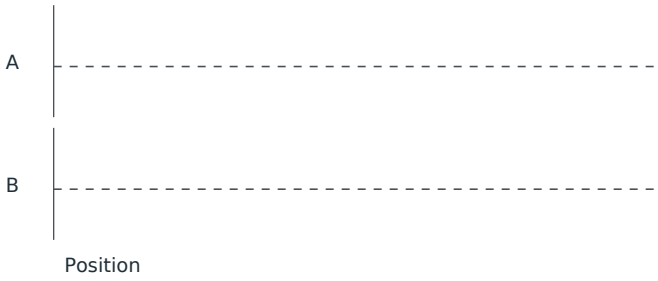

02 Worked example: explain the model

Reference: $c = f\lambda$; $c = 3.0\times10^{8}$ m/s.
Electromagnetic waves in vacuum. Frequency identifies spectral region; mechanical sound needs a medium.

Worked reasoning: In vacuum, all electromagnetic waves travel at $c=3\times10^{8}$ m/s. A frequency of 10^{8} Hz gives wavelength 3 m. Higher frequency means shorter wavelength at the same speed.

Your turn: Draw two waves with a common speed but different wavelengths; label which has higher frequency.

Sentence starter: Both ... . They differ in ... because ... .

Marzano check - circle: ① ② ③

The electromagnetic spectrum

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

03 Read and interpret the model

Order radio, visible and X-rays from longest to shortest wavelength 0. Which has greatest frequency in vacuum?

Sentence starter: I notice ... . This supports ... because ... .

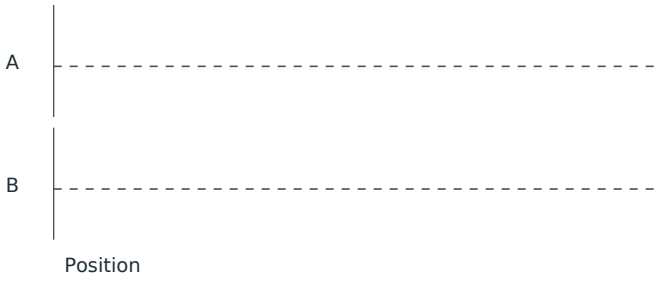

Radio	IR	Visible	UV	X-ray

Label increasing frequency and wavelength.

04 Apply the physics

Use a slow-motion wave simulation with speed 12 m/s and frequency 3 Hz.
Calculate wavelength. Then double frequency while holding speed fixed.
Sketch both patterns over the same distance and label wavelengths. The simulated speed is not the speed of light.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: 1 2 3

Marzano check - circle: 1 2 3

The electromagnetic spectrum

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Explain your reasoning

Why can sunlight cross space but ordinary sound from a speaker cannot cross a vacuum?

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: ① ② ③

06 Review: connect an earlier idea

A system absorbs 80 J heat and does 40 J work.
Find its internal-energy change using $\Delta U = Q - W_{by}$.
Label energy entering, leaving and stored.

Sentence starter: I found … [unit]. This value means … in this situation.

Draw and label all energy transfers across the boundary.

Chosen system

Stored energy change: _____ J

Marzano check - circle: ① ② ③

07 Exit check

For EM waves in vacuum, does changing color change c? What does change?

Sentence starter: I notice … . This supports … because … .

Radio	IR	Visible	UV	X-ray

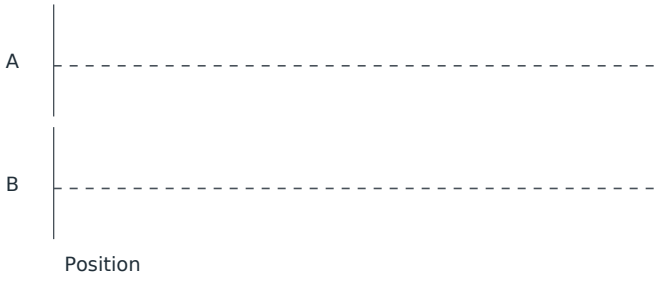

Label increasing frequency and wavelength.

Marzano check - circle: ① ② ③

08 STRETCH: test the model

Design two frequency-wavelength pairs with product 3×10^8 m/s, using powers of 10.

Sentence starter: My design shows … . It meets the requirement by … .

Marzano check - circle: ① ② ③
