Refraction

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Connect a change in wave speed to wavelength and direction.

SUCCESS CRITERIA - I can...

1. Measure ray angles from the normal.
2. Explain frequency continuity at a stationary boundary.
3. Predict bending toward or away from the normal.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

A wave has period 3 s. Find the cycles completed in 15 s and its frequency.

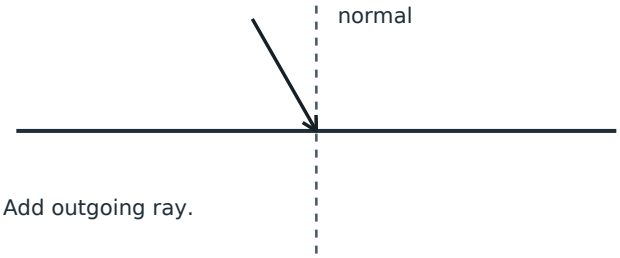

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $v_1 = f\,\lambda_1$; $v_2 = f\,\lambda_2$; $\lambda_2/\lambda_1 = v_2/v_1$.
Stationary boundary: frequency stays constant. A slower medium bends an oblique ray toward the normal.

Worked reasoning: Light enters a slower medium at an angle to the normal and bends toward the normal. The normal is perpendicular to the boundary.

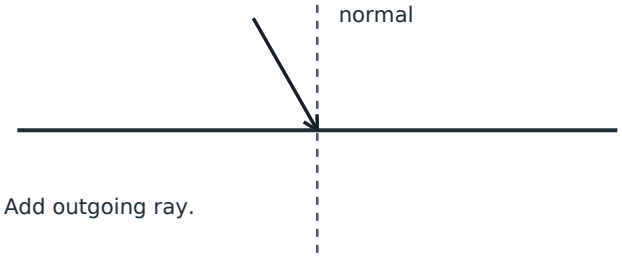

Your turn: Draw and label the boundary, normal, incident ray and refracted ray.

Marzano check - circle: ① ② ③

03 Read and interpret the model

Mark the normal at the boundary. A ray enters a slower medium at an angle. Sketch the refracted direction.

Marzano check - circle: ① ② ③

04 Apply the physics

A wave crosses into a slower medium. Its speed changes from 12 to 6 m/s while frequency stays 3 Hz. Find the wavelength on each side. Draw wavefronts with the correct relative spacing.

Marzano check - circle: ① ② ③

05 Explain your reasoning

A student measures an incidence angle from the surface instead of the normal. If surface angle is 20°, what angle belongs in Snell’s law?

Marzano check - circle: ① ② ③

06 Review: connect an earlier idea

Samples at 14°C and 56°C are mixed with no energy input or phase change. A student reports 68°C at equilibrium. Is that plausible? Explain.
Label temperatures, samples and relevant energy transfers.

Sample A

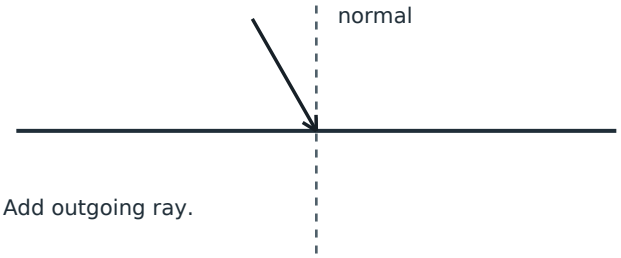

Sample B

Label temperatures and draw energy-transfer arrows.

Marzano check - circle: ① ② ③

07 Exit check

A ray enters a faster medium at an angle. Does it bend toward or away from normal?

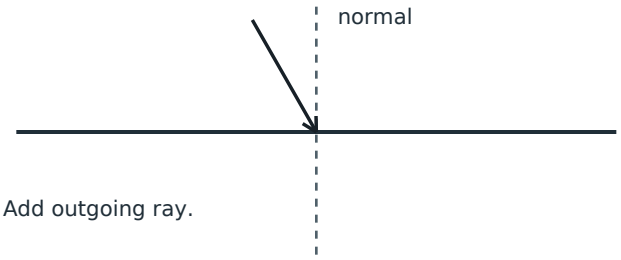

Add outgoing ray.

Marzano check - circle: ① ② ③

08 STRETCH: test the model

Draw two rays entering a slower medium: one obliquely and one along the normal. Explain why one changes direction and the other does not.

Add outgoing ray.

Marzano check - circle: ① ② ③
