Measure sound speed

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Analyze sound travel measurements and their limitations.

SUCCESS CRITERIA - I can...

1. Define one-way versus round-trip paths.
2. Calculate speed from distance and time.
3. Use repeated measurements and discuss timing uncertainty.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

Two wave displacements at one point are -3 mm and +7 mm. Find the resultant and state whether they reinforce or partly cancel.

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: v = d/Δt; v = 2 d/Δt for an echo.
Match the distance to one-way or round-trip travel. Use moderate sound levels and record actual data separately.

Worked reasoning: A sound echo returns 0.4 s after a pulse. At 340 m/s, round-trip distance is 136 m, so the reflector is 68 m away.

Your turn: Draw outgoing and returning paths and mark where the factor of 2 enters.

Marzano check - circle: ① ② ③

03 Read and interpret the model

A pulse travels between two sensors separated by 1.70 m. Delay is 0.0050 s. Is this one-way or echo distance? Find speed.

Marzano check - circle: ① ② ③

04 Apply the physics

A pulse in a wave simulation travels 12 m one way in 5 s. Label distance and time, then calculate its speed. If the distance stays fixed but the recorded time is larger, does the calculated speed rise or fall?

Marzano check - circle: ① ② ③

05 Explain your reasoning

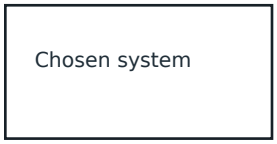

Plan a table for three trials. Include distance, elapsed time, method (one-way or echo), speed and one possible systematic error.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

Two equal-density spheres have radii r and 4 r. Supplied: area scales by 16, mass by 64. Compare their area per mass.
Label energy entering, leaving and stored.

Draw and label all energy transfers across the boundary.

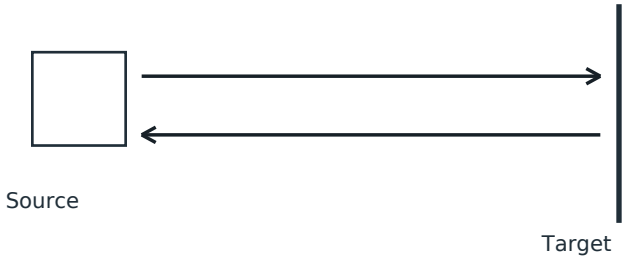

Stored energy change: _____ J

Marzano check - circle: 1 2 3

07 Exit check

Why does using d/t instead of 2 d/t for an echo give an incorrect speed?

Marzano check - circle: 1 2 3

08 STRETCH: test the model

Return to the worked example in problem 2. Two reflectors return echoes at 0.2 and 0.6 s. Find both ranges and their separation along the same line.

Marzano check - circle: 1 2 3
