Coulomb’s law

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Relate electric force to charge magnitude and separation.

SUCCESS CRITERIA - I can...

1. Identify charge signs before predicting direction.
2. Use inverse-square scaling.
3. Calculate force with charge in coulombs and distance in meters.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

A wave travels at fixed speed. A second target is 3 times farther away than the first. Compare one-way travel times.

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $F = k|q_1q_2|/r^2$; $k = 9.0\times10^9\ N\cdot m^2/C^2$.
r is separation. Signs determine attraction/repulsion; the equation gives magnitude.

Worked reasoning: Doubling the separation between two fixed charges makes Coulomb-force magnitude one quarter as large. The charge signs determine attraction or repulsion separately.

Your turn: Sketch both separations for two positive charges and label the force directions.

Label charges and separation.

Object A Object B

Marzano check - circle: ① ② ③

03 Read and interpret the model

Two opposite charges are moved twice as far apart. Draw their force directions and compare the new force with the original.

r

\+ -

Each circle represents one of the labeled objects or charges; r is their center-to-center separation.

Marzano check - circle: ① ② ③

04 Apply the physics

Two fixed charges attract with a force of 12 N in a simulation. Double their center-to-center separation while keeping both charges fixed. Label both separations and calculate the new force magnitude using the inverse-square relationship.

r = ?

Charge 1 Charge 2

Marzano check - circle: ① ② ③

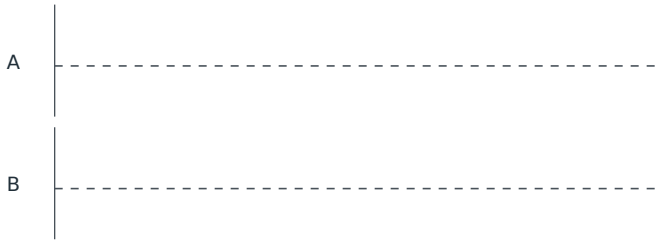

05 Explain your reasoning

One charge has twice the magnitude of the other. Does it exert twice the force on the smaller charge? Explain.

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

A 600 Hz sound travels through air. Do air particles mainly move parallel or perpendicular to propagation? Name the wave type.
Label a wave sketch to support the calculation or comparison.

Time or position: choose and label

Marzano check - circle: 1 2 3

07 Exit check

With separation fixed, one charge magnitude triples. What happens to the force magnitude?

Label charges and separation.

Object A Object B

Marzano check - circle: 1 2 3

08 STRETCH: test the model

A force is 12 N. Double one charge and double separation. Find the new magnitude and explain each factor.

Label charges and separation.

Object A Object B

Marzano check - circle: 1 2 3
