Current makes a magnetic field

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Connect current direction with the magnetic field around a wire.

SUCCESS CRITERIA - I can...

1. Sketch circular field lines around a straight wire.
2. Use a stated right-hand rule.
3. Predict the effect of reversing current.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Warm-up: bring back an earlier idea

A total current of 12 A splits between two identical parallel branches. Find each branch current.

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $B = \mu_0 I/(2\pi r)$; $\mu_0 = 4\pi \times 10^{-7}$ T·m/A.
Long straight wire. Right thumb follows conventional current; curled fingers show field direction.

Worked reasoning: Around a straight wire carrying conventional current out of the page, the magnetic field circles counterclockwise by the right-hand rule. A dot means out of page.

Your turn: Draw three field arrows around the wire and explain what the dot represents.

Current out of page (dot). Add field arrows.

Marzano check - circle: ① ② ③

03 Read and interpret the model

Conventional current points out of the page. Use the right-hand rule to draw the surrounding magnetic field direction.

Current out of page (dot). Add field arrows.

Marzano check - circle: ① ② ③

04 Apply the physics

A long straight wire carries current out of the page. At a fixed distance, the current doubles. Use $B \propto I$ to compare field strengths. Add field arrows and indicate whether their direction changes.

Current out of page (dot). Add field arrows.

Marzano check - circle: ① ② ③

Current makes a magnetic field

antocciphysics

05 Explain your reasoning

What happens to field direction if the current reverses while its magnitude stays the same?

Marzano check - circle: 1 2 3

06 Review: connect an earlier idea

Two objects have charges -4 nC and -6 nC. Predict attraction or repulsion and draw both force directions. Label charges and both interaction forces.

Charge A Charge B

Marzano check - circle: 1 2 3

07 Exit check

At the same current, distance from a long wire doubles. Using B proportional to 1/r, compare field strength.

Current out of page (dot). Add field arrows.

Marzano check - circle: 1 2 3

08 STRETCH: test the model

Return to the worked example in problem 2. Reverse the current. Redraw the field arrows and explain what stays the same in an ideal symmetric setup.

Cross = current into page. Add magnetic-field arrows.

Marzano check - circle: 1 2 3
