Charge and the electric car

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Explain charge interactions and trace an electric car's energy transfers.

SUCCESS CRITERIA - I can...

1. Predict attraction or repulsion from charge signs.
2. Distinguish charge from energy.
3. Trace energy from a battery to moving wheels.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use "charge" and "circuit" to explain your model or result. Sentence starters are optional.

charge: a property responsible for electric interactions

circuit: a connected arrangement of electrical components

motor: a device converting electrical energy to mechanical output

01 Warm-up: bring back an earlier idea

An ideal blackbody has peak wavelength 966.7 nm.
Use $\lambda_{max}\,T = 2.90\times10^{6}$ nm·K.
Estimate temperature.

Word help: blackbody = an ideal absorber/emitter used in a thermal-radiation model

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: $E_{electrical} = E_{mechanical} + E_{thermal}$ + other transfers. Energy accounting for a motor with no net energy storage. A battery transfers energy; charge already exists in the wires.

Worked reasoning: Rubbing can transfer electrons between materials. If one isolated object gains charge -3 units and another loses the same electrons, their charge changes add to zero.

Your turn: Draw before-and-after charge accounts for both objects. Distinguish transfer from creation of charge.

Sentence starter: The ... in my model represents ... . Its label shows ... .

Label charges and separation.

Object A Object B

Marzano check - circle: ① ② ③

Charge and the electric car

antocciphysics

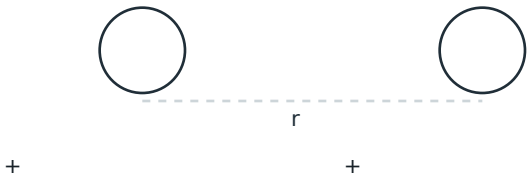

Continue down each column.

Sentence starters are optional. You may plan in any language.

03 Read and interpret the model

Draw force arrows for two positive charges, then for a positive and a negative charge.

Sentence starter: The … in my model represents … . Its label shows … .

Each circle represents one of the labeled objects or charges; r is their center-to-center separation.

Marzano check - circle: 1 2 3

04 Apply the physics

During a model-car test, the battery transfers 120 J and the car gains 30 J of translational kinetic energy. Its height stays fixed. Complete the energy account, find energy in other forms and explain why the circuit’s charge is not used up.

Sentence starter: Under the assumption …, the evidence … supports … because … .

Draw and label all energy transfers across the boundary.

Chosen system

Stored energy change: _____ J

Marzano check - circle: 1 2 3

05 Explain your reasoning

A student says the motor uses up the current so less returns to the battery.
Explain the mistake for a steady series circuit.

Sentence starter: The step I would change is … . The evidence is … .

Marzano check - circle: 1 2 3

Charge and the electric car

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

06 Review: connect an earlier idea

Three instantaneous displacements are +4 mm, -6 mm and -8 mm.
Find their sum and explain why one displacement value does not determine total wave energy.
Show the signed contributions and their sum.

Word help: displacement = change from initial position to final position, with direction

Sentence starter: Under the assumption ..., the evidence ... supports ... because ... .

A

B

Sum

Add signed displacements; label units.

Marzano check - circle: 1 2 3

07 Exit check

How can an initially neutral object be attracted to a charged object without having a net charge?

Sentence starter: I notice ... . This supports ... because ... .

Label charges and separation.

Object A Object B

Marzano check - circle: 1 2 3

08 STRETCH: test the model

An initially neutral pair separates with charges +8 nC and -8 nC. One then shares all its net charge equally with an identical initially neutral conductor.
Find the three final charges.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Label charges and separation.

Object A Object B

Marzano check - circle: 1 2 3
