Theme and chassis layout

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Make a dimensioned layout that supports the circuit and drivetrain.

SUCCESS CRITERIA - I can...

1. Label component locations and clearances.
2. Use dimensions to check that parts fit.
3. Explain a structural choice with evidence.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “chassis” and “clearance” to explain your model or result. Sentence starters are optional.

chassis: the frame that supports a vehicle’s components

clearance: space that lets neighboring parts avoid rubbing or colliding

constraint: a requirement or limit that the design must meet

01 Warm-up: bring back an earlier idea

A motor uses 4 W for 6 s.
Find electrical energy and name a possible non-mechanical output.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: ① ② ③

02 Worked example: explain the model

Reference: available length = chassis length - components - clearances.
Use measured dimensions for a top view. Keep axles parallel and controls accessible. Get approval before tools/cuts.

Worked reasoning: A 20 cm chassis reserves 6 cm for the battery, 5 cm for the motor and 2 cm total for end clearances. The remaining 7 cm must cover other components and gaps.

Your turn: Draw a dimensioned top view showing these regions.
Label any assumed dimensions rather than pretending they were measured.

Sentence starter: The ... in my model represents ... . Its label shows ... .

Marzano check - circle: ① ② ③

Theme and chassis layout

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

03 Read and interpret the model

Draw a dimensioned top view of your chassis.
Label motor, battery, switch, axle lines and wheel clearance.
Mark the intended forward direction.

Sentence starter: The … in my model represents … . Its label shows … .

Marzano check - circle: 1 2 3

04 Apply the physics

A sample chassis is 18 cm long. A battery needs 6 cm and the motor region needs 5 cm along its length.
Mark those regions and calculate the space left before gaps. On your actual plan, add measured clearances and distinguish them from these sample dimensions.

Sentence starter: My design shows … . It meets the requirement by … .

Marzano check - circle: 1 2 3

05 Explain your reasoning

Your theme adds a heavy decoration far to one side.
Predict a possible effect and propose a way to test it without claiming the effect is certain.

Sentence starter: I predict … . My model supports this because … .

Marzano check - circle: 1 2 3

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

06 Review: connect an earlier idea

A total current of 16 A splits between two identical parallel branches.
Find each branch current.
Draw the stated circuit and label quantities relevant to the question.

Sentence starter: I found ... [unit]. This value means ... in this situation.

Draw the complete circuit and label shared nodes.

Marzano check - circle: 1 2 3

07 Exit check

Name the measurement you will verify before the first cut and record the teacher checkpoint.

Sentence starter: I notice ... . This supports ... because ... .

Marzano check - circle: 1 2 3

08 STRETCH: test the model

Return to the worked example in problem 2. Fit the same components on an 18 cm chassis. Propose two layouts and identify a measurement needed before cutting.

Sentence starter: I notice ... . This supports ... because ... .

Marzano check - circle: 1 2 3
