Equilibrium and missing forces

antocciphysics | TEACHER KEY | CPA + MATCHING SEI

Learning target: Find a missing force when acceleration is zero.

Accept equivalent correct methods and clearly labeled models. Language supports do not change the physics demand. Supplied data are examples; actual lab measurements and teacher checkpoints must be recorded from the lesson.

01. Warm-up: bring back an earlier idea *Review: Unit 1, Day 15.*
Only weight 30 N downward from Earth. The hand is no longer in contact; upward velocity is not a force.

02. Worked example: explain the model
4+6-10=0 N; upward total equals downward total.

03. Find the balance
Friction 20 N left; net 0 N.

04. A still lamp
30 N up.

05. Parked or cruising?
First two can; turning car has changing velocity and nonzero net force.

06. Review: connect an earlier idea *Review: Unit 1, Day 6.*
3 m east and 4 m south. Add each pair of signed components.

07. Exit check
Additional 7 N left; 12-5-7=0 N.

08. STRETCH: test the model
Examples (0, 10),(2, 8),(5, 5) N; sum remains 10 N.

Equilibrium and missing forces

antocciphysics | TEACHER KEY | HONORS + MATCHING SEI

Learning target: Find a missing force when acceleration is zero.

Accept equivalent correct methods and clearly labeled models. Language supports do not change the physics demand. Supplied data are examples; actual lab measurements and teacher checkpoints must be recorded from the lesson.

01. Warm-up: bring back an earlier idea *Review: Unit 1, Day 15.*
Weight down, normal up, kinetic friction right. No vertical acceleration; rightward horizontal acceleration if friction is the only horizontal force.

02. Worked example: explain the model
4+6-10=0 N; upward total equals downward total.

03. Two component balance
(-12,-9) N; magnitude 15 N; 36.9° south of west.

04. Two-rope hanger
2 T sin 45=39.2; T 27.7 N. Only vertical components add up to weight.

05. Change angle
T 30=98/(2×0.5)=98 N; T 60=56.6 N. Steeper ropes provide more vertical component per unit tension.

06. Review: connect an earlier idea *Review: Unit 1, Day 6.*
R=(2, 4) m; magnitude ≈4.472 m at 63.43° north of east. C=(-2, -4) m.

07. Exit check
T 29.4 N at rest; upward a requiresT-mg=ma, soT>29.4 N.

08. STRETCH: test the model
(-30,+40) N; magnitude 50 N; 53.1° above leftward horizontal. Balance must hold in both axes.
