Frayer models

SECTION A / VOCABULARY Name _____

Find the word on the screen. Talk it through with your partner, then write or sketch in its four boxes.

Force

Meaning in my words How would you explain force to a friend?	**How can you tell?** When your hand pushes a cart, what pushes and what receives the push?
Example or sketch Which force arrow would you draw while a hand pushes a cart right?	**Non-example and why** The hand lets go and the cart keeps rolling. Is the hand still pushing it?

Net force

Meaning in my words How would you explain net force to a friend?	**How can you tell?** Two people push one cart in opposite directions. Why do the arrow directions matter?
Example or sketch One person pushes 6 N right and another 4 N left. What single arrow replaces both?	**Non-example and why** A student adds those pushes to get 10 N right. Which push did they count the wrong way?

SECTION A / VOCABULARY Name _____

Find the word on the screen. Talk it through with your partner, then write or sketch in its four boxes.

Newton's 1st law

Meaning in my words What does Newton's first law say in your own words?	**How can you tell?** A cart is already moving and its forces balance. What stays the same?
Example or sketch Draw a cart at three one-second intervals as it coasts right with zero net force.	**Non-example and why** A classmate says a rolling cart needs a forward net force every second. What would that force actually change?

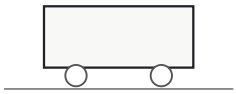

Inertia

Meaning in my words How would you explain inertia to a friend?	**How can you tell?** An empty cart and a loaded cart start at rest. The same net force pushes each for one second. Which gains less speed? Why?
Example or sketch With balanced forces, where will a rolling cart be one second later and one second after that?	**Non-example and why** Someone points to the hand pushing the cart and says, "That push is inertia." What would you tell them?

Doodle the idea

SECTION B / DRAW WITH YOUR TEACHER Name _____

Draw a moving cart with balanced force arrows in orange and its separate velocity arrow in purple.

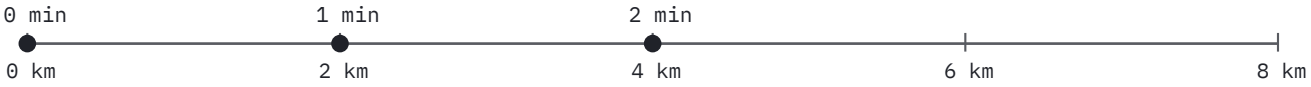

My marks mean

One camera. Which window?

SECTION E / BACK / FINAL MEETING ONLY Name _____

XJ is drifting right. Tracker fixes: 0 min → 0 km; 1 min → +2 km; 2 min → +4 km. At minute 3, one camera can aim at only one window: A +4, B +6 or C +8 km.

PICK A JOB / DELIVER ONE PRODUCT

☐ **Tracking engineer**

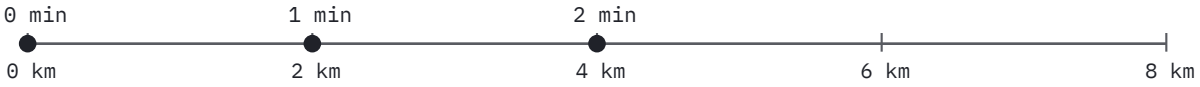

Draw the predicted fix. Radio the operator: “At minute 3, aim at window ___.” Use the spacing and the purple velocity arrow to explain your call.

☐ **Live science broadcaster**

Deliver a 15-second update: tell viewers which window to watch. A caller asks, “No engine? Why won’t it stop?” Use your cart drawing to answer on air.

One partner makes the graphic; one delivers the first call. Show your evidence to the crew or the audience.

OUR GRAPHIC / COMMAND OR ON-AIR CUE

INCOMING UPDATE / WAIT FOR YOUR TEACHER

Listen to the new report. Switch speakers. Keep or change your call; point to the new evidence.
