Plan a prediction in two dimensions

LEARNING TARGET I can plan a prediction using evidence and fixed axes.

A · KEY VOCABULARY

Frame	Keep the origin and axes fixed.
Components	Signed x and y parts; calculate separately.
Units	Make all units match before substituting.
Limit	State assumptions, such as steady velocity.

B · KEY EQUATIONS + UNITS

$$x_f = x_0 + v_x t$$

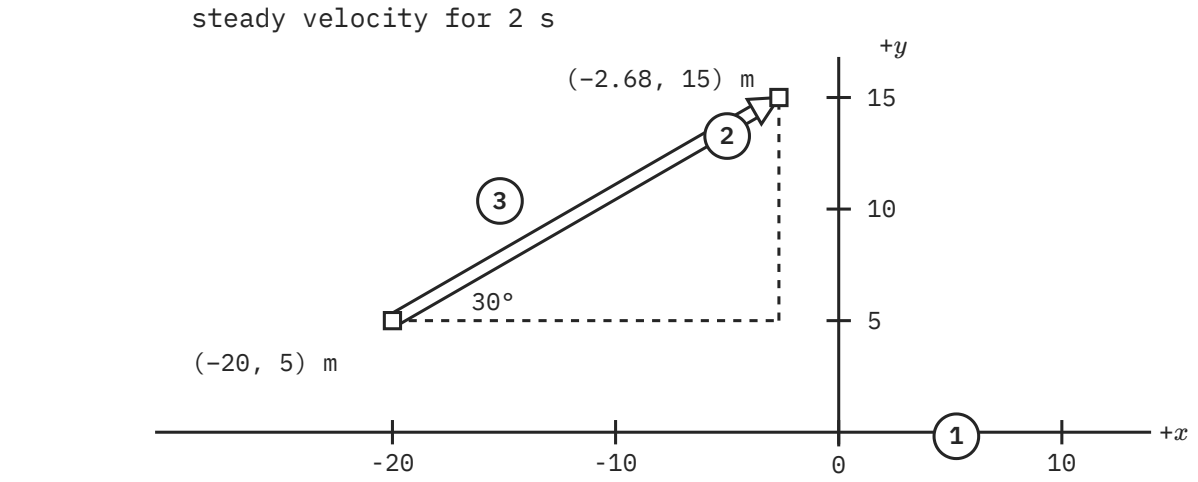

$$y_f = y_0 + v_y t$$

v_x $v \cos\theta$

v_y $v \sin\theta$; θ from $+x$

C · COLOR IT · START + CHANGE

Probe example; fixed axes.

☐ **1 · PENCIL** Origin and axes

☐ **2 · BLUE** Start and end positions

☐ **3 · BLUE** Displacement direction

D · WORKED EXAMPLE

A probe starts at (−20, 5) m and moves at **10 m/s**, **30°** from $+x$ toward $+y$, for **2 s**. **Find its new coordinates.**

GIVEN	EQUATION	WORK	ANSWER
$x_0 = -20$ **m**; $y_0 = 5$ **m** $v = 10$ **m/s**; $\theta = 30°$ $t = 2$ **s**; steady v	Resolve v: $v_x = 8.66$ **m/s** $v_y = 5$ **m/s**	$x_f = -20 + 8.66(2)$ $y_f = 5 + 5(2)$	**(−2.68, 15) m** Final x is still negative.

E · THE 2026-XJ THREAD

DAY 21 OF 22 · NEW TOOL: A TWO-AXIS PLAN

For fictional XJ, name the frame, units and motion assumptions. Fixed Earth and steady velocity are classroom simplifications.

Unit question: How fast is it moving, and where will it arrive?

UNIT 1 COLOR CODE ☐ green speeding up ☐ red slowing down ☐ yellow steady · balanced ☐ blue position · displacement ☐ purple velocity ☐ orange forces pencil · everything else
