Cart lab: change driving force

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Use controlled data to describe how net force affects acceleration.

SUCCESS CRITERIA - I can...

1. Change driving force while keeping total mass fixed.
2. Use data or a graph to compare accelerations.
3. Explain how resistance affects the ideal relationship.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “constant” and “net force” to explain your model or result. Sentence starters are optional.

constant: not changing during the stated interval

net force: the vector sum of all forces on one object

mass: a measure of how strongly an object resists acceleration

01 Bring back an earlier idea

A rover travels straight east at a steady 6 m/s. A second rover turns at the same steady speed. Which can have zero net force?
Explain using velocity.

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $a = F_{net}/M$; $F_{drive} = m_h g$.
Keep total moving mass M fixed. The driving weight equals net force only when resistance is negligible.

Worked reasoning: A 2 kg cart has net forces 2 and 6 N in two trials. Using a=F/m gives accelerations 1 and 3 m/s². Tripling net force triples acceleration.

Your turn: Draw a force-versus-acceleration graph for these trials.
Explain the meaning of the slope.

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: ① ② ③

03 Read a proportional pattern

Use the supplied model data for the same 2 kg system. What happens to acceleration when force doubles?
Predict a at 8 N.

Sentence starter: I predict … . My model supports this because … .

Net force (N)	a(m/s²)
2	1
4	2
6	3

Marzano check - circle: ① ② ③

04 Keep mass constant

A student adds a new mass from the supply box to the hanger. What two quantities change?
Describe a better method for this experiment.

Sentence starter: I notice … . This supports … because … .

Marzano check - circle: ① ② ③

Cart lab: change driving force

antocciphysics

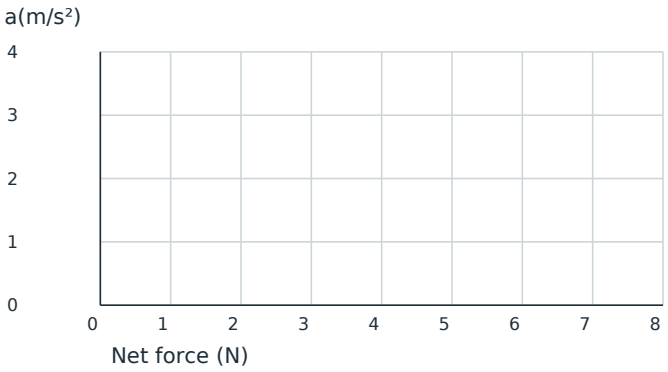

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Graph the pattern

Plot the model data from 3.
Label both axes and draw a trend line. If you collect your own data, put those in a separate table and label them measured.

Sentence starter: The … in my model represents … . Its label shows … .

Marzano check - circle: ① ② ③

06 Choose a method

With a fixed net force, a 3 kg system accelerates at 10 m/s².
Predict acceleration for a 6 kg system.
State a control needed for this comparison.

Word help: acceleration = rate of change of velocity

Sentence starter: I predict … . My model supports this because … .

Marzano check - circle: ① ② ③

07 Exit check

A fixed-mass system accelerates at 2 m/s² under 4 N net force.
Predict its acceleration under 6 N net force.
Explain with a comparison.

Sentence starter: I predict … . My model supports this because … .

Marzano check - circle: ① ② ③

08 STRETCH: Apply it another way

Design three net-force settings that give accelerations 1, 2, 3 m/s² for a 3 kg cart.
Explain what must stay fixed.

Sentence starter: My design shows … . It meets the requirement by … .

Marzano check - circle: ① ② ③
