Equilibrium and missing forces

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Find a missing force when acceleration is zero.

SUCCESS CRITERIA - I can...

1. Recognize rest and constant velocity as possible equilibrium.
2. Find missing forces from a zero net-force condition.
3. Explain why turning is not equilibrium.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “equilibrium” and “balanced” to explain your model or result. Sentence starters are optional.

equilibrium: zero net force and zero acceleration

balanced: adding to zero net force in this force context

tension: the pulling force through a stretched rope or cable

01 Bring back an earlier idea

A 3 kg ball is moving upward at 5 m/s after leaving a hand. Ignore air resistance; use g=10 N/kg.
Draw and justify its free-body diagram.

Word help: justify = support your answer with a reason or evidence

Sentence starter: My claim is … . The diagram/data show …, so … .

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $\Sigma F_x = 0$; $\Sigma F_y = 0 \Rightarrow a = 0$.
Equilibrium allows rest or constant velocity. Resolve missing forces along each axis. Use g = 9.8 N/kg.

Worked reasoning: A sign has weight 10 N down and two vertical upward pulls of 4 and 6 N. The vector sum is zero, so equilibrium is possible.

Your turn: Draw and label all three forces.
Identify the equation that checks vertical balance.

Sentence starter: The … in my model represents … . Its label shows … .

Marzano check - circle: ① ② ③

03 Find the balance

The box moves right at steady velocity. A rope pulls 20 N right.
Find friction and net force.

Sentence starter: I found … [unit]. This value means … in this situation.

The dot represents the object. Steady rightward velocity

Marzano check - circle: ① ② ③

04 A still lamp

A lamp’s weight is 30 N. It hangs from one vertical rope and does not accelerate.
Find tension and draw its direction.

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: ① ② ③

Equilibrium and missing forces

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

05 Parked or cruising?

A parked car and a car moving straight at steady speed both have constant velocity. Which can have balanced forces? What about a car turning at steady speed?

Sentence starter: I notice … . This supports … because … .

Marzano check - circle: 1 2 3

06 Choose a method

A goes 7 m east and 5 m north. B then goes 4 m west and 9 m south.
Draw the route and find the endpoint relative to the start.

Sentence starter: I found … [unit]. This value means … in this situation.

Marzano check - circle: 1 2 3

07 Exit check

A box at rest has 12 N right and 5 N left. What additional horizontal force balances it?
Show your addition.

Word help: at rest = not moving in the chosen reference frame

Sentence starter: I notice … . This supports … because … .

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Return to the worked example in problem 2.
Find three different pairs of nonnegative upward pulls that balance the same 10 N sign.
Explain what stays constant.

Sentence starter: Both … . They differ in … because … .

Marzano check - circle: 1 2 3
