Velocity graphs and components

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Read a velocity graph and describe motion in two directions.

SUCCESS CRITERIA - I can...

1. Use signed velocity-time area to find displacement.
2. Represent horizontal and vertical components separately.
3. Distinguish graph height, slope and vector magnitude.

Core: teacher selects from 1-9. **Stretch:** 10 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A cart is at 4, 10, 16 m at 0, 1, 2 s. Predict its position at 8 s. State an assumption and a measurement that could challenge it.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $\Delta x = v_x \Delta t$; $\Delta y = v_y \Delta t$.
For constant components. Subscripts x and y name the horizontal and vertical directions. Signed velocity-time area gives displacement.

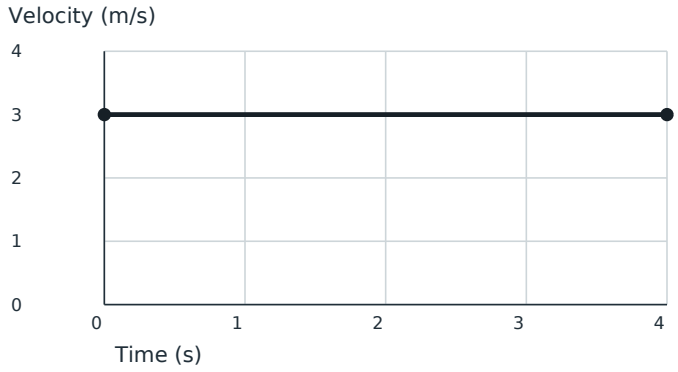

Worked reasoning: A cart travels at 3 m/s east for 2 s. The rectangle under its velocity-time graph has area 3×2=6 m, its displacement.

Your turn: Sketch this graph. Shade the area and label the units that multiply to meters.

Marzano check - circle: ① ② ③

03 Steady does not mean stopped

Read the velocity graph. Circle the motion: stopped / steady motion / speeding up. Find the displacement in 6 s.

Marzano check - circle: ① ② ③

04 Move, then wait

A cart moves west at 2 m/s for 3 s and then waits for 2 s. How far west is it from the start? Do the waiting seconds undo the trip?

Marzano check - circle: ① ② ③

Velocity graphs and components

antocciphysics

Continue down each column.

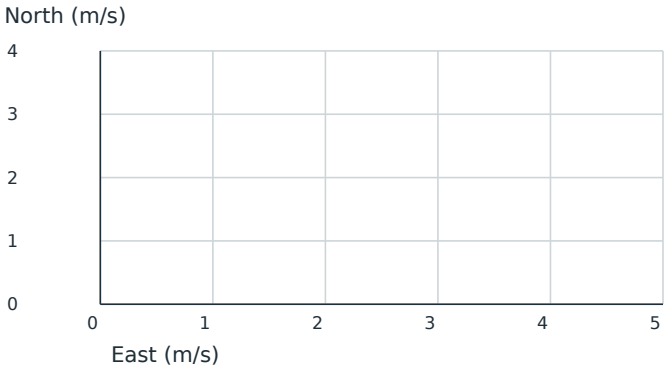

05 One diagonal motion

A drone moves 4 m east and 3 m north each second at the same time. Write its eastward and northward velocity components. Does it first go east, then north?

Marzano check - circle: 1 2 3

06 Make the components visible

From the start dot, draw an arrow ending 3 squares east and 2 north. One square represents 1 m/s. Label both component sizes.

Marzano check - circle: 1 2 3

07 Fix the speed claim

For a velocity with components 4 m/s east and 3 m/s north, the diagonal speed is given as 5 m/s. A student says it is 7 m/s. Explain using a sketch.

Marzano check - circle: 1 2 3

08 Choose a method

A cart goes from 15 m to 5 m in 3 s at steady velocity. Find velocity and sketch its position-time graph.

Marzano check - circle: 1 2 3

09 Exit check

A velocity graph stays at -2 m/s for 5 s. Give displacement with direction. A different object has components 2 m/s east and 1 m/s south: sketch its motion direction.

Marzano check - circle: 1 2 3

10 STRETCH: Apply it another way

Draw a four-second velocity-time graph with nonzero motion but zero displacement. Give its distance traveled.

Marzano check - circle: 1 2 3
