Net force first

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Combine forces before using mass to predict acceleration.

SUCCESS CRITERIA - I can...

1. Find net force before dividing by mass.
2. State acceleration with units and direction.
3. Separate acceleration direction from motion direction.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A 5 kg sign hangs still from one vertical cord. Use g=10 N/kg. Name both forces, their sources, magnitudes and directions.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: ΣF = ma; a = ΣF/m.
Add signed forces on the same object before dividing by mass. N/kg = m/s².

Worked reasoning: A 2 kg cart has 9 N right and 3 N left. Net force=6 N right; a=6/2=3 m/s² right. Add forces before dividing by mass.

Your turn: Draw arrows for both forces, then a separate net-force arrow. Explain why 9/2 is not the acceleration.

Marzano check - circle: ① ② ③

03 Read the arrows

For the 4 kg cart, find net horizontal force and acceleration. Write each step.

The dot represents the object. Mass: 4 kg

Marzano check - circle: ① ② ③

04 Balanced but moving

A 2 kg cart moves left with 5 N right and 5 N left. Find a. Describe its next motion in this ideal model.

Marzano check - circle: ① ② ③

Net force first

antocciphysics

Continue down each column.

05 Compare two masses

The same 6 N net force acts on 2 kg and 3 kg carts. Find both accelerations. Which changes velocity more quickly?

Marzano check - circle: 1 2 3

06 Choose a method

A cart is at 5, 12, 19 m at 0, 1, 2 s. Predict its position at 9 s. State an assumption and a measurement that could challenge it.

Marzano check - circle: 1 2 3

07 Exit check

An 8 kg object has 50 N right and 18 N left. Draw the forces, calculate net force, and find a with direction.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Find two different pairs of opposite horizontal forces that give the same 6 N net force right. Keep mass 2 kg and compare accelerations.

Marzano check - circle: 1 2 3
