Transfer task: defend and revise

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Defend the prediction with evidence and make a visible, justified revision.

SUCCESS CRITERIA - I can...

1. Graph the central prediction and coordinate bounds.
2. Defend a claim using calculations and model limits.
3. Document a specific revision with evidence.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

01 Bring back an earlier idea

A student says a 3 kg cart under 15 N net force accelerates at 45 m/s². Identify the error, correct it and name a check you can now do independently.

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $x_f = x_i + v_x t$; $y_f = y_i + v_y t$.
Use your Day 21 data and consistent units. Defend the endpoint and assumptions. A bounded range is not a probability.

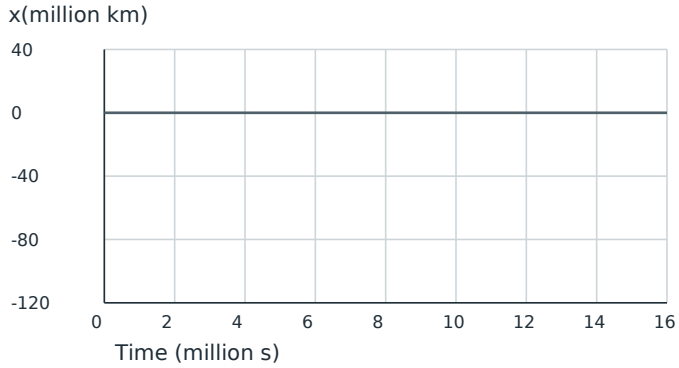

Worked reasoning: A cart model predicts 12 m after 4 s; the observation is 10±0.5 m. Since 12 is outside 9.5-10.5 m, the model needs checking. The mismatch alone does not identify the cause.

Your turn: Mark the observed interval and prediction on a number line. Name one model assumption to recheck.

Marzano check - circle: ① ② ③

03 Show the prediction

Using your Day 21 CPA work, draw an x-versus-time graph. Connect the central start and finish. Then add lower and upper prediction lines. Label time in millions of seconds and x in millions of km.

Marzano check - circle: ① ② ③

04 Write a public briefing

Write 4-5 sentences: central position; range; assumption; one excluded physical effect; what you can and cannot claim about Earth impact.

Marzano check - circle: ① ② ③

Transfer task: defend and revise

antocciphysics

05 Defend and revise

Ask a partner to check one calculation and one graph label. Record one question, then revise a specific step or reason why it should stay. If no partner is available, perform and label a self-review.

Support: I changed (or kept)___because___.

Marzano check - circle: 1 2 3

06 Choose a method

A 6 kg sign hangs still from one vertical cord. Use g=10 N/kg. Name both forces, their sources, magnitudes and directions.

Marzano check - circle: 1 2 3

07 Exit check

Point to one piece of work that meets each success criterion. Name one claim you can now support and one question about curving paths that requires Unit 2.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

Revise a constant-speed model from a 0 m start to match the central observation of 10 m after 4 s. Propose a new observation that could test the revision.

Marzano check - circle: 1 2 3
