Equilibrium and missing forces

antocciphysics

Name: _____ **Block:** _____ (teacher only) **Mastery Rating:** _____

LEARNING TARGET Find a missing force when acceleration is zero.

SUCCESS CRITERIA - I can...

1. Recognize rest and constant velocity as possible equilibrium.
2. Find missing forces from a zero net-force condition.
3. Explain why turning is not equilibrium.

Core: teacher selects from 1-7. **Stretch:** 8 after checking your work.

MARZANO SELF-CHECK

① Need help starting

② Can do part; need help

③ Solve and explain with allowed supports

LANGUAGE GOAL Use “equilibrium” and “balanced” to explain your model or result. Sentence starters are optional.

equilibrium: zero net force and zero acceleration

balanced: adding to zero net force in this force context

tension: the pulling force through a stretched rope or cable

01 Bring back an earlier idea

A 3 kg box slides left at 5 m/s on a rough horizontal floor after release.
Draw forces and explain what follows about vertical and horizontal acceleration.

Sentence starter: Under the assumption ..., the evidence ... supports ... because ... .

Marzano check - circle: ① ② ③

02 Explain a worked example

Reference: $\Sigma F_x = 0$; $\Sigma F_y = 0 \Rightarrow a = 0$.
Equilibrium allows rest or constant velocity. Resolve missing forces along each axis. Use g = 9.8 N/kg.

Worked reasoning: A sign has weight 10 N down and two vertical upward pulls of 4 and 6 N. The vector sum is zero, so equilibrium is possible.

Your turn: Draw and label all three forces.
Identify the equation that checks vertical balance.

Sentence starter: The ... in my model represents ... . Its label shows ... .

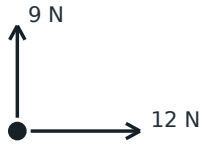

Marzano check - circle: ① ② ③

03 Two component balance

A stationary object has 12 N right and 9 Nup. A third force balances both.
Find its components, magnitude and direction.

Word help: magnitude = size of a quantity without its direction

Sentence starter: I found ... [unit]. This value means ... in this situation.

The dot represents the object. Third force not shown

Marzano check - circle: ① ② ③

Read down the left column, then down the right. Use the open space to draw, calculate and explain.

Equilibrium and missing forces

antocciphysics

Continue down each column.

Sentence starters are optional. You may plan in any language.

04 Two-rope hanger

A 4 kg lamp hangs symmetrically from ropes 45° above horizontal.
Find tension in each rope.
Explain why it is not just half the weight.

Sentence starter: Under the assumption ..., the evidence ... supports ... because ... .

Marzano check - circle: 1 2 3

05 Change angle

A 10 kg sign hangs from two symmetrical ropes. First each is 30° above horizontal, then 60°.
Find tension in each case and compare.

Sentence starter: Both ... . They differ in ... because ... .

Marzano check - circle: 1 2 3

06 Choose a method

A=(7, -5) m and B=(-5, 9) m.
Find R, magnitude and direction.
Choose C so A+B+C=0 and sketch the route.

Word help: magnitude = size of a quantity without its direction

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: 1 2 3

07 Exit check

A 3 kg lamp hangs at rest from one vertical rope.
Find tension. Would that value hold if it accelerated upward?
State an equation.

Word help: at rest = not moving in the chosen reference frame

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: 1 2 3

08 STRETCH: Apply it another way

A stationary junction has a 30 N horizontal force right, a 40 N vertical force down, and one unknown force.
Find the unknown vector, magnitude and direction.

Word help: magnitude = size of a quantity without its direction

Sentence starter: I found ... [unit]. This value means ... in this situation.

Marzano check - circle: 1 2 3
